

LP5990 Micropower 200mA CMOS Low Dropout Voltage Regulator

Check for Samples: [LP5990](#)

FEATURES

- Operation from 2.2V to 5.5V Input
- $\pm 1\%$ Accuracy Over Temp Range
- Output Voltage from 0.8V to 3.6V in 50mV Increments
- 30 μA Quiescent Current (Enabled)
- 10nA Quiescent Current (Disabled)
- 160mV Dropout at 200mA Load
- 60 μV_{RMS} Output Voltage Noise
- 60 μs Start-Up Time
- 500 μs Shut-Down Time
- PSRR 55 dB at 10 kHz
- Stable with 0402 1.0 μF Ceramic Capacitors
- Logic Controlled Enable
- Thermal-Overload and Short-Circuit Protection

APPLICATIONS

- Cellular Phones
- Hand-Held Information Appliances

PACKAGE

- 4-Bump DSBGA, 0.4 mm Pitch 866 μm x 917 μm (Lead Free)

TYPICAL APPLICATION CIRCUIT

DESCRIPTION

The LP5990 regulator is designed to meet the requirements of portable, battery-powered systems providing an accurate output voltage, low noise and low quiescent current.

The LP5990 will provide a 1.8V output from a low input voltage of 2.2V and can provide 200mA to an external load.

When switched into shutdown mode via a logic signal at the enable pin, the power consumption is reduced to virtually

zero.

Fast shut-down is achieved by the push pull architecture.

The LP5990 is designed to be stable with space saving 0402 ceramic capacitors as small as 1 μF , this gives an overall solution size of < 2.5mm².

Performance is specified for a -40°C to 125°C junction temperature range.

The device is available in DSBGA Package (0.4mm pitch) and is available with 1.2V, 1.3V, 1.8V, 2.8V, 3.0V, 3.3V and 3.6V outputs. Lower voltage options down to 0.8V are available on request. For all other output voltage options please contact your local TI sales office.

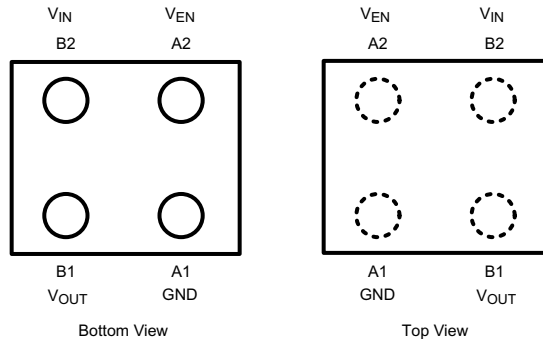

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

All trademarks are the property of their respective owners.

Package Number YFQ0004CEA**

The actual physical placement of the package marking will vary from part to part.

PIN DESCRIPTIONS

Pin No.	Symbol	Name and Function
DSBGA		
A2	V _{EN}	Enable input; disables the regulator when ≤ 0.35V. Enables the regulator when ≥ 1.0V.
A1	GND	Common ground.
B1	V _{OUT}	Output voltage. A 1.0 μF Low ESR capacitor should be connected to this Pin. Connect this output to the load circuit.
B2	V _{IN}	Input voltage supply. A 1.0 μF capacitor should be connected at this input.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

ABSOLUTE MAXIMUM RATINGS (1)(2)(3)

V _{IN} Pin: Input Voltage	-0.3 to 6.0V	
V _{OUT} Pin: Output Voltage	-0.3 to (V _{IN} + 0.3V) to 6.0V (max)	
V _{EN} Pin: Enable Input Voltage	-0.3 to 6.0V (max)	
Continuous Power Dissipation (4)	Internally Limited	
Junction Temperature (T _{JMAX})	150°C	
Storage Temperature Range	-65 to 150°C	
Maximum Lead Temperature (Soldering, 10 sec.)	260°C	
ESD Rating (5)	Human Body Model	2 kV
	Machine Model	200V

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the component may occur. Operating Ratings are conditions under which operation of the device is specified. Operating Ratings do not imply specified performance limits. For specified performance limits and associated test conditions, see the Electrical Characteristics tables.
- (2) All voltages are with respect to the potential at the GND pin.
- (3) If Military/Aerospace specified devices are required, please contact the Texas Instruments Sales Office/ Distributors for availability and specifications.
- (4) Internal thermal shutdown circuitry protects the device from permanent damage.
- (5) The Human body model is a 100 pF capacitor discharged through a 1.5 kΩ resistor into each pin. The machine model is a 200 pF capacitor discharged directly into each pin. MIL-STD-883 3015.7

OPERATING RATINGS ^{(1), (2)}

V_{IN} : Input Voltage Range	2.2V to 5.5V
V_{EN} : Enable Voltage Range	0 to 5.5V (max)
Recommended Load Current ⁽³⁾	0 to 200 mA
Junction Temperature Range (T_J)	-40°C to +125°C
Ambient Temperature Range (T_A) ⁽³⁾	-40°C to +85°C

- (1) Absolute Maximum Ratings indicate limits beyond which damage to the component may occur. Operating Ratings are conditions under which operation of the device is specified. Operating Ratings do not imply specified performance limits. For specified performance limits and associated test conditions, see the Electrical Characteristics tables.
- (2) All voltages are with respect to the potential at the GND pin.
- (3) In applications where high power dissipation and/or poor package thermal resistance is present, the maximum ambient temperature may have to be derated. Maximum ambient temperature (T_{A-MAX}) is dependent on the maximum operating junction temperature ($T_{J-MAX-OP} = 125^\circ\text{C}$), the maximum power dissipation of the device in the application (P_{D-MAX}), and the junction-to ambient thermal resistance of the part/package in the application (θ_{JA}), as given by the following equation: $T_{A-MAX} = T_{J-MAX-OP} - (\theta_{JA} \times P_{D-MAX})$. See [applications](#) section.

THERMAL PROPERTIES

Junction to Ambient Thermal Resistance θ_{JA} ⁽¹⁾	JEDEC Board (DSBGA) ⁽²⁾	100.6°C/W
	4L Cellphone Board (DSBGA)	174.8°C/W

- (1) Junction-to-ambient thermal resistance is highly application and board-layout dependent. In applications where high maximum power dissipation exists, special care must be paid to thermal dissipation issues in board design.
- (2) Detailed description of the board can be found in JESD51-7

ELECTRICAL CHARACTERISTICS

Limits in standard typeface are for $T_A = 25^\circ\text{C}$. Limits in **boldface** type apply over the full operating junction temperature range (-40°C $\leq T_J \leq$ +125°C). Unless otherwise noted, specifications apply to the LP5990 Typical Application Circuit (pg. 1) with: $V_{IN} = V_{OUT(NOM)} + 1.0\text{V}$, or 2.2V, whichever is higher. $V_{EN} = 1.0\text{V}$, $C_{IN} = C_{OUT} = 1.0 \mu\text{F}$, $I_{OUT} = 1.0 \text{mA}$. ^{(1), (2)}

Symbol	Parameter	Conditions	Min	Typ	Max	Units
V_{IN}	Input Voltage		2.2		5.5	V
ΔV_{OUT}	Output Voltage Tolerance	$V_{IN} = (V_{OUT(NOM)} + 1.0\text{V})$ to 5.5V	-1		1	%
	Line Regulation	$V_{IN} = (V_{OUT(NOM)} + 1.0\text{V})$ to 5.5V, $I_{OUT} = 1 \text{mA}$		1		mV
	Load Regulation	$I_{OUT} = 1 \text{mA}$ to 200 mA		5	15	mV
I_{LOAD}	Load Current	See ⁽³⁾	0			mA
	Maximum Output Current		200			
I_Q	Quiescent Current ⁽⁴⁾	$V_{EN} = 1.0\text{V}$, $I_{OUT} = 0 \text{mA}$		30	75	μA
		$V_{EN} = 1.0\text{V}$, $I_{OUT} = 200 \text{mA}$		35		
		$V_{EN} = <0.35\text{V}$ (Disabled)		0.01		
V_{DO}	Dropout Voltage ⁽⁵⁾	$I_{OUT} = 200 \text{mA}$		160	250	mV
I_{SC}	Short Circuit Current Limit	See ⁽⁶⁾		600		mA
PSRR	Power Supply Rejection Ratio ⁽⁷⁾	$f = 10 \text{kHz}$, $I_{OUT} = 200 \text{mA}$		55		dB
e_n	Output Noise Voltage ⁽⁷⁾	BW = 10 Hz to 100 kHz, $V_{IN} = 4.2\text{V}$, $I_{OUT} = 1 \text{mA}$	$V_{OUT} = 1.8\text{V}$		60	μV_{RMS}
			$V_{OUT} = 2.8\text{V}$		85	
$T_{SHUTDOWN}$	Thermal Shutdown	Temperature		160		°C
		Hysteresis		20		
Enable Input Thresholds						
V_{IL}	Low Input Threshold (V_{EN})	$V_{IN} = 2.2\text{V}$ to 5.5V			0.35	V

- (1) All voltages are with respect to the potential at the GND pin.
- (2) Min and Max limits are specified by design, test, or statistical analysis. Typical numbers are not specified, but do represent the most likely norm.
- (3) The device maintains a stable, regulated output voltage without a load current.
- (4) Quiescent current is defined here as the difference in current between the input voltage source and the load at V_{OUT} .
- (5) Dropout voltage is the voltage difference between the input and the output at which the output voltage drops to 100 mV below its nominal value. This parameter only applies to output voltages above 2.8V.
- (6) Short Circuit Current is measured with V_{OUT} pulled to 0V.
- (7) This specification is ensured by design.

ELECTRICAL CHARACTERISTICS (continued)

Limits in standard typeface are for $T_A = 25^\circ\text{C}$. Limits in **boldface** type apply over the full operating junction temperature range ($-40^\circ\text{C} \leq T_J \leq +125^\circ\text{C}$). Unless otherwise noted, specifications apply to the LP5990 Typical Application Circuit (pg. 1) with: $V_{IN} = V_{OUT(NOM)} + 1.0\text{V}$, or 2.2V , whichever is higher. $V_{EN} = 1.0\text{V}$, $C_{IN} = C_{OUT} = 1.0\ \mu\text{F}$, $I_{OUT} = 1.0\ \text{mA}$. ^{(1), (2)}

Symbol	Parameter	Conditions	Min	Typ	Max	Units
V_{IH}	High Input Threshold (V_{EN})	$V_{IN} = 2.2\text{V to } 5.5\text{V}$	1.0			V
I_{EN}	Input Current at V_{EN} Pin ⁽⁸⁾	$V_{EN} = 5.5\text{V}$ and $V_{IN} = 5.5\text{V}$		2	5	μA
		$V_{EN} = 0.0\text{V}$ and $V_{IN} = 5.5\text{V}$		0.001		
Transient Characteristics						
ΔV_{OUT}	Line Transient ⁽⁷⁾	$T_{rise} = T_{fall} = 30\ \mu\text{s}$. $\Delta V_{IN} = 600\ \text{mV}$		4		mV
	Load Transient ⁽⁷⁾	$I_{OUT} = 1\ \text{mA to } 200\ \text{mA}$ in $1\ \mu\text{s}$		-50		mV
		$I_{OUT} = 200\ \text{mA to } 1\ \text{mA}$ in $1\ \mu\text{s}$			50	
T_{ON}	Turn on Time	To 98% of $V_{OUT(NOM)}$		60		μs
T_{OFF}	Turn off Time from Enable	100mV of $V_{OUT(NOM)}$ $I_{OUT} = 0\ \text{mA}$		500		μs

(8) There is a $3\ \text{M}\Omega$ resistor between V_{EN} and ground on the device.

OUTPUT & INPUT CAPACITOR, RECOMMENDED SPECIFICATIONS ⁽¹⁾

Symbol	Parameter	Conditions	Min	Nom	Max	Units
C_{IN}	Input Capacitance	Capacitance for stability	0.3	1.0		μF
C_{OUT}	Output Capacitance		0.3	1.0	10	
ESR	Output/Input Capacitance		5		500	$\text{m}\Omega$

(1) The minimum capacitance should be greater than $0.3\ \mu\text{F}$ over the full range of operating conditions. The capacitor tolerance should be 30% or better over the full temperature range. The full range of operating conditions for the capacitor in the application should be considered during device selection to ensure this minimum capacitance specification is met. X7R capacitors are recommended however capacitor types X5R, Y5V and Z5U may be used with consideration of the application and conditions.

TYPICAL PERFORMANCE CHARACTERISTICS

Unless otherwise specified, $C_{IN} = C_{OUT} = 1.0\mu F$, $V_{IN} = V_{OUT(NOM)} + 1.0V$, $V_{EN} = 1.0V$, $I_{OUT} = 1mA$, $T_A = 25^\circ C$.

APPLICATION HINTS

POWER DISSIPATION AND DEVICE OPERATION

The permissible power dissipation for any package is a measure of the capability of the device to pass heat from the power source, the junctions of the IC, to the ultimate heat sink, the ambient environment. Thus the power dissipation is dependent on the ambient temperature and the thermal resistance across the various interfaces between the die and ambient air. As stated in Note 3 of the [Operating Ratings](#) table, the allowable power dissipation for the device in a given package can be calculated using the equation:

$$P_D = \frac{(T_{JMAX} - T_A)}{\theta_{JA}}$$

The actual power dissipation across the device can be represented by the following equation:

$$P_D = (V_{IN} - V_{OUT}) \times I_{OUT}$$

This establishes the relationship between the power dissipation allowed due to thermal consideration, the voltage drop across the device, and the continuous current capability of the device. These two equations should be used to determine the optimum operating conditions for the device in the application.

EXTERNAL CAPACITORS

Like any low-dropout regulator, the LP5990 requires external capacitors for regulator stability. The LP5990 is specifically designed for portable applications requiring minimum board space and smallest components. These capacitors must be correctly selected for good performance.

INPUT CAPACITOR

An input capacitor is required for stability. The input capacitor should be at least equal to or greater than the output capacitor. It is recommended that a 1.0 μ F capacitor be connected between the LP5990 input pin and ground.

This capacitor must be located a distance of not more than 1 cm from the input pin and returned to a clean analogue ground. Any good quality ceramic, tantalum, or film capacitor may be used at the input.

Important: To ensure stable operation it is essential that good PCB practices are employed to minimize ground impedance and keep input inductance low. If these conditions cannot be met, or if long leads are to be used to connect the battery or other power source to the LP5990, then it is recommended to increase the input capacitor to at least 2.2 μ F. Also, tantalum capacitors can suffer catastrophic failures due to surge current when connected to a low-impedance source of power (like a battery or a very large capacitor). If a tantalum capacitor is used at the input, it must be ensured by the manufacturer to have a surge current rating sufficient for the application. There are no requirements for the ESR (Equivalent Series Resistance) on the input capacitor, but tolerance and temperature coefficient must be considered when selecting the capacitor to ensure the capacitance will remain 0.3 μ F over the entire operating temperature range.

OUTPUT CAPACITOR

The LP5990 is designed specifically to work with very small ceramic output capacitors. A ceramic capacitor (dielectric types X5R or X7R) 1.0 μ F, and with ESR between 5 m Ω to 500 m Ω , is suitable in the LP5990 application circuit.

Other ceramic capacitors such as Y5V and Z5U are less suitable owing to their inferior temperature characteristics. (See section in [Capacitor Characteristics](#)).

For this device the output capacitor should be connected between the V_{OUT} pin and a good ground connection and should be mounted within 1 cm of the device.

It may also be possible to use tantalum or film capacitors at the device output, V_{OUT} , but these are not as attractive for reasons of size and cost (see the section [Capacitor Characteristics](#)).

The output capacitor must meet the requirement for the minimum value of capacitance (0.3 μ F) and have an ESR value that is within the range 5 m Ω to 500 m Ω for stability.

CAPACITOR CHARACTERISTICS

The LP5990 is designed to work with ceramic capacitors on the input and output to take advantage of the benefits they offer. For capacitance values in the range of 1.0 μF to 4.7 μF , ceramic capacitors are the smallest, least expensive and have the lowest ESR values, thus making them best for eliminating high frequency noise. The ESR of a typical 1.0 μF ceramic capacitor is in the range of 20 m Ω to 40 m Ω , which easily meets the ESR requirement for stability for the LP5990

For both input and output capacitors careful interpretation of the capacitor specification is required to ensure correct device operation. The capacitor value can change greatly depending on the conditions of operation and capacitor type.

In particular the output capacitor selection should take account of all the capacitor parameters to ensure that the specification is met within the application. Capacitance value can vary with DC bias conditions as well as temperature and frequency of operation. Capacitor values will also show some decrease over time due to aging. The capacitor parameters are also dependant on particular case size with smaller sizes giving poorer performance figures in general. As an example [Figure 16](#) shows a typical graph showing a comparison of capacitor case sizes in a Capacitance versus DC Bias plot. As shown in the graph, as a result of the DC Bias condition, the capacitance value may drop below the minimum capacitance value given in the recommended capacitor table (0.3 μF in this case). Note that the graph shows the capacitance out of spec for the 0402 case size capacitor at higher bias voltages. It is therefore recommend that the capacitor manufacturer's specifications for the nominal value capacitor are consulted for all conditions as some capacitors may not be suited in the application.

The temperature performance of ceramic capacitors varies by type and manufacturer. Most large value ceramic capacitors ($\geq 2.2 \mu\text{F}$) are manufactured with Z5U or Y5V temperature characteristics, which results in the capacitance dropping by more than 50% as the temperature goes from 25°C to 85°C.

A better choice for temperature coefficient in a ceramic capacitor is X7R. This type of capacitor is the most stable and holds the capacitance within $\pm 15\%$ over the temperature range. Tantalum capacitors are less desirable than ceramic for use as output capacitors because they are more expensive when comparing equivalent capacitance and voltage ratings in the 0.47 μF to 4.7 μF range.

Another important consideration is that tantalum capacitors have higher ESR values than equivalent size ceramics. This means that while it may be possible to find a tantalum capacitor with an ESR value within the stable range, it would have to be larger in capacitance (which means bigger and more costly) than a ceramic capacitor with the same ESR value. It should also be noted that the ESR of a typical tantalum will increase about 2:1 as the temperature goes from 25°C down to -40°C, so some guard band must be allowed.

Figure 16.

NO-LOAD STABILITY

The LP5990 will remain stable and in regulation with no external load.

ENABLE CONTROL

The LP5990 may be switched ON or OFF by a logic input at the ENABLE pin, V_{EN} . A high voltage at this pin will turn the device on. When the enable pin is low, the regulator output is off and the device typically consumes 3 nA. If the application does not require the shutdown feature, the V_{EN} pin should be tied to V_{IN} to keep the regulator output permanently on.

The signal source used to drive the V_{EN} input must be able to swing above and below the specified turn-on/off voltage thresholds listed in the [Electrical Characteristics](#) section under V_{IL} and V_{IH} .

DSBGA MOUNTING

The DSBGA package requires specific mounting techniques, which are detailed in TI Application Note AN-1112 ([SNVA009](#)).

For best results during assembly, alignment ordinals on the PC board may be used to facilitate placement of the DSBGA device.

DSBGA LIGHT SENSITIVITY

Exposing the DSBGA device to direct light may cause incorrect operation of the device. Light sources such as halogen lamps can affect electrical performance if they are situated in proximity to the device.

Light with wavelengths in the red and infra-red part of the spectrum have the most detrimental effect thus the fluorescent lighting used inside most buildings has very little effect on performance.

PACKAGING INFORMATION

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

⁽⁴⁾ Multiple Top-Side Markings will be inside parentheses. Only one Top-Side Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Top-Side Marking for that device.

YFQ0004

NOTES: A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
B. This drawing is subject to change without notice.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
