

LTC6417 and LTC2209 Combo Board

DESCRIPTION

Demonstration circuit 1685A features the [LTC®6417](#), a 1.6GHz differential ADC buffer driving the [LTC2209](#), a 16-bit 160Msps ADC. The DC1685B is supplied with a bandpass filter centered at 140MHz between the buffer and ADC. The filter center frequency can be changed to optimize performance at different analog input frequencies. Both single-ended and differential configurations are supported

at the inputs. The DC1685A has been developed from the DC1281A, used to characterize LTC2209 family of ADCs.

Use the DC1685A with a DC890 FastDAACS and PScope™ Software to collect time and frequency data.

Design files for this circuit board are available.

All registered trademarks and trademarks are the property of their respective owners.

QUICK START PROCEDURE

DC1685A is easy to set up. Refer to Figure 1 for proper measurement equipment setup and follow the procedure below:

1. Apply power to the DC1685A 3.3V across the pins marked V_{CC} and PWR_GND and 5V across AMP_POWER and PWR_GND. The DC1685A requires up to 800mA from the V_{CC} , and 200mA from the AMP_POWER.
2. Supply power to the DC890B fast DAACS board with an external 6V \pm 0.5V, 1A on turrets G7(+) and G1(–) or the adjacent 2.1mm power jack. Unless the DC890B detects external power, it will not activate the LVDS mode of the Xilinx Spartan-III FPGA. The FPGA actively terminates the LVDS repeaters at the outputs of the LTC2209.
3. Connect encode clock to the DC1685A on the SMA connector marked (J3) Encode Clock. This transformer coupled input is terminated with a 100 Ω at the ADC clock inputs. For best noise performance the clock input must be driven with a very low jitter source. When using a sinusoidal generator, the amplitude should be as large as possible, up to 13dBm. Using bandpass filters on the clock and analog inputs will improve the noise performance by reducing the wideband noise power of the signals. Data sheet FFT plots are taken with 10 pole LC filters made by TTE (Los Angeles, CA) to suppress signal generator harmonics, non-harmonically related spurs and broadband noise. Low phase noise (jitter) Agilent 8644B generators are used with the TTE bandpass filters for the clock and analog input.
4. Connect the analog input to the DC1685A to the SMA connector marked (J6) IN+ at 140MHz. This input is capacitively coupled to a 1:4 balun transformer WBC4-11.
5. Start and configure PScope data collection software for the FastDAACS (DC890) by selecting AutoConfigure. If the board is not detected, update PScope for latest software and device list, and then select LTC2209 from the Configure → Device menu. You can also manually configure PScope for the LTC2209 by setting the parameters listed in Table 1.
6. Collect data by clicking on the Collect button. Time and frequency plots will be displayed in the PScope window. Consult the DC890B Quick Start Guide for more details.

This procedure contains only one critical sequence. The user must apply supply voltage before applying signal power to the analog and clock inputs or forcing a voltage to any other turrets. The user must also remove the signal to the analog and clock inputs and voltages on any other turret before turning down the supply voltage.

QUICK START PROCEDURE

Table 2 summarizes the function of each SMA connector and jumper on the board and their suggested default settings.

Table 1. PScope User Configuration for LTC2209.

USER CONFIGURE	
Bits	16

Positive Edge Clk	[x]

Table 2. DC1685A Connector and Jumpers

CONNECTOR/ JUMPER	FUNCTION
J2 (MODE)	ADC Output Format and Clock Duty Stabilizer CDS. Default to V_{CC} for twos complement and CDS off.
J3 (SHDN)	ADC Power Shutdown. Default to RUN.
J3 (DITH)	ADC Internal Dither Enable. Default to OFF to disable internal dither.
J4 (PGA)	ADC Programmable Gain Amplifier. Default to 1× gain mode.
J5 (IN-)	Differential Input. Not connected by default. Install capacitor C9 to drive the input differentially.
J6 (IN+)	Differential Input. Connected to input balun for single-ended operation. Drive from a 50Ω signal source. No external termination needed.
J7 (ENCODE CLOCK)	Single-Ended Input. Drive with a 13dBm low jitter 50Ω source.
J11 (OR)	Overrange Output. Connect to an oscilloscope input.

Buffer ADC Interface

The LTC6417 has been specifically designed to interface directly with high speed A/D converters. In Figure 2, the differential LTC6417 outputs are bandpass filtered to drive the differential inputs of the LTC2209. Such a filter suppresses harmonics and limits the wideband noise of the amplifier to achieve the best SFDR and SNR. Table 3 lists component values suggested for bandpass filters optimized for various input frequencies. The 1:4 transformer at the input of the LTC6417 performs a single-ended to differential conversion and provides 6dB voltage gain.

For more detail on the LTC6417 and LTC2209, consult the data sheets.

Table 3. Bandpass Filter Component Values for Various Input Frequencies

COMPONENTS	INPUT FREQUENCIES			
	70MHz	140MHz	270MHz	380MHz

ESD Caution

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

Legal Terms and Conditions

By using the evaluation board discussed herein (together with any tools, components documentation or support materials, the "Evaluation Board"), you are agreeing to be bound by the terms and conditions set forth below ("Agreement") unless you have purchased the Evaluation Board, in which case the Analog Devices Standard Terms and Conditions of Sale shall govern. Do not use the Evaluation Board until you have read and agreed to the Agreement. Your use of the Evaluation Board shall signify your acceptance of the Agreement. This Agreement is made by and between you ("Customer") and Analog Devices, Inc. ("ADI"), with its principal place of business at One Technology Way, Norwood, MA 02062, USA. Subject to the terms and conditions of the Agreement, ADI hereby grants to Customer a free, limited, personal, temporary, non-exclusive, non-sublicensable, non-transferable license to use the Evaluation Board FOR EVALUATION PURPOSES ONLY. Customer understands and agrees that the Evaluation Board is provided for the sole and exclusive purpose referenced above, and agrees not to use the Evaluation Board for any other purpose. Furthermore, the license granted is expressly made subject to the following additional limitations: Customer shall not (i) rent, lease, display, sell, transfer, assign, sublicense, or distribute the Evaluation Board; and (ii) permit any Third Party to access the Evaluation Board. As used herein, the term "Third Party" includes any entity other than ADI, Customer, their employees, affiliates and in-house consultants. The Evaluation Board is NOT sold to Customer; all rights not expressly granted herein, including ownership of the Evaluation Board, are reserved by ADI. CONFIDENTIALITY. This Agreement and the Evaluation Board shall all be considered the confidential and proprietary information of ADI. Customer may not disclose or transfer any portion of the Evaluation Board to any other party for any reason. Upon discontinuation of use of the Evaluation Board or termination of this Agreement, Customer agrees to promptly return the Evaluation Board to ADI. ADDITIONAL RESTRICTIONS. Customer may not disassemble, decompile or reverse engineer chips on the Evaluation Board. Customer shall inform ADI of any occurred damages or any modifications or alterations it makes to the Evaluation Board, including but not limited to soldering or any other activity that affects the material content of the Evaluation Board. Modifications to the Evaluation Board must comply with applicable law, including but not limited to the RoHS Directive. TERMINATION. ADI may terminate this Agreement at any time upon giving written notice to Customer. Customer agrees to return to ADI the Evaluation Board at that time. LIMITATION OF LIABILITY. THE EVALUATION BOARD PROVIDED HEREUNDER IS PROVIDED "AS IS" AND ADI MAKES NO WARRANTIES OR REPRESENTATIONS OF ANY KIND WITH RESPECT TO IT. ADI SPECIFICALLY DISCLAIMS ANY REPRESENTATIONS, ENDORSEMENTS, GUARANTEES, OR WARRANTIES, EXPRESS OR IMPLIED, RELATED TO THE EVALUATION BOARD INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTY OF MERCHANTABILITY, TITLE, FITNESS FOR A PARTICULAR PURPOSE OR NONINFRINGEMENT OF INTELLECTUAL PROPERTY RIGHTS. IN NO EVENT WILL ADI AND ITS LICENSORS BE LIABLE FOR ANY INCIDENTAL, SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES RESULTING FROM CUSTOMER'S POSSESSION OR USE OF THE EVALUATION BOARD, INCLUDING BUT NOT LIMITED TO LOST PROFITS, DELAY COSTS, LABOR COSTS OR LOSS OF GOODWILL. ADI'S TOTAL LIABILITY FROM ANY AND ALL CAUSES SHALL BE LIMITED TO THE AMOUNT OF ONE HUNDRED US DOLLARS (\$100.00). EXPORT. Customer agrees that it will not directly or indirectly export the Evaluation Board to another country, and that it will comply with all applicable United States federal laws and regulations relating to exports. GOVERNING LAW. This Agreement shall be governed by and construed in accordance with the substantive laws of the Commonwealth of Massachusetts (excluding conflict of law rules). Any legal action regarding this Agreement will be heard in the state or federal courts having jurisdiction in Suffolk County, Massachusetts, and Customer hereby submits to the personal jurisdiction and venue of such courts. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement and is expressly disclaimed.
