*DS14185 EIA/TIA-2323 Driver x 5 Receiver*

# Datasheet.Directory

Literature Number: SNLS093B

# DS14185

## EIA/TIA-232 3 Driver x 5 Receiver

### General Description

The DS14185 is a three driver, five receiver device which conforms to the EIA/TIA-232-E standard.

The flow-through pinout facilitates simple non-crossover board layout. The DS14185 provides a one-chip solution for the common 9-pin serial RS-232 interface between data terminal and data communications equipment.

- Flow through pinout
- Failsafe receiver outputs
- 20-pin SOIC package
- LapLink® compatible –200 kbps data rate

### Features

- Replaces one 1488 and two 1489s
- Conforms to EIA/TIA-232-E
- 3 drivers and 5 receivers

### Connection Diagram

### Functional Diagram

**Absolute Maximum Ratings** (Note 1)

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

|   |                        |
|---|------------------------|
| Supply Voltage ( $V_{CC}$ )               | +7V                    |
| Supply Voltage ( $V^+$ )                  | +15V                   |
| Supply Voltage ( $V^-$ )                  | -15V                   |
| Driver Input Voltage                      | 0V to $V_{CC}$         |
| Driver Output Voltage (Power Off)         | $\pm 15V$              |
| Receiver Input Voltage                    | $\pm 25V$              |
| Receiver Output Voltage ( $R_{OUT}$ )     | 0V to $V_{CC}$         |
| Maximum Package Power Dissipation @ +25°C |                        |
| M Package                                 | 1488 mW                |
| Derate M Package                          | 11.9 mW/°C above +25°C |

|   |                 |
|---|-----------------|
| Storage Temperature Range                     | -65°C to +150°C |
| Lead Temperature Range (Soldering, 4 seconds) | +260°C          |
| ESD Ratings (HBM, 1.5 k $\Omega$ , 100 pF)    | $\geq 1.5$ kV   |

**Recommended Operating Conditions**

|  | Min   | Typ   | Max   | Units |
|--|-------|-------|-------|-------|
| Supply Voltage ( $V_{CC}$ )              | +4.75 | +5.0  | +5.25 | V     |
| Supply Voltage ( $V^+$ )                 | +9.0  | +12.0 | +13.2 | V     |
| Supply Voltage ( $V^-$ )                 | -13.2 | -12.0 | -9.0  | V     |
| Operating Free Air Temperature ( $T_A$ ) | 0     | 25    | 70    | °C    |

| t <sub>r</sub>                  | Rise Time                     |   |     | 87  | 175 | ns    |
| t <sub>f</sub>                  | Fall Time                     |   |     | 40  | 100 | ns    |

**Note 1:** Absolute Maximum Ratings are those values beyond which the safety of the device cannot be guaranteed. They are not meant to imply that the devices should be operated at these limits. The table of Electrical Characteristics specifies conditions of device operation.

**Note 2:** Current into device pins is defined as positive. Current out of device pins is defined as negative. All voltages are referenced to ground unless otherwise specified. For current, minimum and maximum values are specified as an absolute value and the sign is used to indicate direction. For voltage logic levels, the more positive value is designated as maximum. For example, if -6V is a maximum, the typical value (-6.8V) is more negative.

**Note 3:** All typicals are given for: V<sub>CC</sub> = +5.0V, V<sup>+</sup> = +12.0V, V<sup>-</sup> = -12V, T<sub>A</sub> = +25°C.

**Note 4:** Only one driver output shorted at a time.

**Note 5:** Generator characteristics for driver input: f = 64 kHz (128 kbits/sec), t<sub>r</sub> = t<sub>f</sub> < 10 ns, V<sub>IH</sub> = 3V, V<sub>IL</sub> = 0V, duty cycle = 50%.

**Note 6:** Generator characteristics for receiver input: f = 64 kHz (128 kbits/sec), t<sub>r</sub> = t<sub>f</sub> = 200 ns, V<sub>IH</sub> = 3V, V<sub>IL</sub> = -3V, duty cycle = 50%.

**Note 7:** If receiver inputs are unconnected, receiver output is a logic high.

**Note 8:** Refer to typical curves. Driver output slew rate is measured from the +3.0V to the -3.0V level on the output waveform. Inputs not under test are connected to V<sub>CC</sub> or GND. Slew rate is determined by load capacitance. To comply with a 30 V/μs maximum slew rate, a minimum load capacitance of 390 pF is recommended.

## Pin Descriptions

| Pin #              | Name             | Description   |
|--------------------|------------------|---|
| 13, 15, 16         | D <sub>IN</sub>  | Driver Input Pins   |
| 5, 6, 8            | D <sub>OUT</sub> | Driver Output Pins, RS-232 Levels                         |
| 2, 3, 4, 7, 9      | R <sub>IN</sub>  | Receiver Input Pins, RS-232 Levels                        |
| 12, 14, 17, 18, 19 | R <sub>OUT</sub> | Receiver Output Pins                                      |
| 11                 | GND              | Ground  |
| 1                  | V <sup>+</sup>   | Positive Power Supply Pin (+9.0 ≤ V <sup>+</sup> ≤ +13.2) |
| 10                 | V <sup>-</sup>   | Negative Power Supply Pin (-9.0 ≤ V <sup>-</sup> ≤ -13.2) |
| 20                 | V <sub>CC</sub>  | Positive Power Supply Pin (+5V ±5%)                       |

## Applications Information

$$V_{CC} = 4.75V, V^+ = 10.8V, V^- = -10.8V$$

In a typical Data Terminal Equipment (DTE) to Data Circuit-Terminating Equipment (DCE) 9-pin de-facto interface implementation, 2 data lines and 6 control lines are required. The data lines are TXD and RXD. The control lines are RTS, DTR, DSR, DCD, CTS, and RI.

The DS14185 is a 3 x 5 Driver/Receiver and offers a single chip solution for this DTE interface. As shown in *Figure 5*, this interface allows for direct flow-thru interconnect. For a more conservative design, the user may wish to insert ground traces between the signal lines to minimize cross talk.

### LapLink COMPATIBILITY

The DS14185 can easily provide 128 kbps data rate under maximum driver load conditions of C<sub>L</sub> = 2500 pF and R<sub>L</sub> = 3 kΩ, while power supplies are:

### MOUSE DRIVING

A typical mouse can be powered from the drivers. Two driver outputs connected in parallel and set to V<sub>OH</sub> can be used to supply power to the V<sup>+</sup> pin of the mouse. The third driver output is set to V<sub>OL</sub> to sink the current from the V<sup>-</sup> terminal. Refer to typical curves of V<sub>OUT</sub>/I<sub>OUT</sub>. Typical mouse specifications are:

10 mA at +6V

5 mA at -6V

### LIFE SUPPORT POLICY

NATIONAL'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT AND GENERAL COUNSEL OF NATIONAL SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component is any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

### BANNED SUBSTANCE COMPLIANCE

National Semiconductor certifies that the products and packing materials meet the provisions of the Customer Products Stewardship Specification (CSP-9-111C2) and the Banned Substances and Materials of Interest Specification (CSP-9-111S2) and contain no "Banned Substances" as defined in CSP-9-111S2.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
