## Fiber Optic Transmitter and Receiver for 50 MBaud MOST®

## Data Sheet

### Description

AFBR-1012 Transmitter and AFBR-2012 Receiver are designed to transmit/ receive up to 25MBit/s optical data which are biphase coded (up to 50Mbaud). Both are packaged in 4-pin transfer molded, low-cost packages ready for assembly into MOST® plastic fiber optic connector receptacles.

The transmitter utilizes a 650 nm LED source with integrated optics for efficient coupling into 1mm Polymer Optical Fiber (POF), and the receiver contains a high speed PIN diode to receive this light.

Input/output data has TTL switching levels, compatible with MOST® Network Interface Controller ICs.

These optical components are specified for operation over a -40°C to +95°C temperature range, and meet the reliability requirements of automotive applications. In the absence of data activity, the receiver switches to very low power mode. While in this mode, the PIN diode can sense new data activity and switch the receiver back to full operation.
