

Digital transistors (built-in resistors)

●Equivalent circuit

DTA144EE/DTA144EUA

DTA144ECA /DTA144EKA/DTA144ESA

DIGITAL TRANSISTOR (PNP)

FEATURES

1. Built-in bias resistors enable the configuration of an inverter circuit without connecting external input resistors(see equivalent circuit).
2. The bias resistors consist of thin-film resistors with complete isolation to allow negative biasing of the input.They also have the advantage of almost completely eliminating parasitic effects.
3. Only the on/off conditions need to be set for operation, making device design easy.
