**hynix**

# Dream of a Rich Future is Now Reality

## Corporate Profile

Hynix Semiconductor is a leading supplier of advanced semiconductor memory and Image Sensor products.

We design, develop, manufacture and market a wide variety of DRAM and NAND Flash memories, and CMOS Image Sensors (CIS).

Memory components are an essential part of leading-edge Computing, Consumer, Communication and Wireless applications.

Image Sensors are used in a wide range of wireless communications and handheld consumer applications

- ▶ DRAM and NAND Flash memories are focus products
- ▶ CMOS Image Sensors will diversify product portfolio
- ▶ 2008 Revenues of USD\$6.2bn
- ▶ Market capitalization of USD\$2.4bn as of December 2008
- ▶ Global presence with 4 manufacturing sites and 26 sales offices worldwide
- ▶ 21,400 employees worldwide

## Recent Accomplishments

### 2009~2008

#### 2009

- 03** · Developed and acquired Intel validation for 2-Rank 8GB DDR3 RDIMM
- 02** · Developed the World's First 44nm DDR3 DRAM

#### 2008

- 12** · Developed the World's First 2Gb Mobile DRAM
- 11** · Introduced Industry's Fastest 7Gbps, 1Gb GDDR5 Graphics DRAM
- 08** · Completed Construction of 300mm Fabrication Plant of 3rd Factory in Cheongju
  - Demonstrated World's First 16GB 2-Rank R-DIMM Using MetaRAM™ Technology
- 04** · Developed the world's fastest Mobile LPDDR2
- 02** · Introduced 2-Rank 8GB DDR2 RDIMM
- 01** · Signed an agreement for joint R&D for next-generation non-volatile memory technology with Numonyx
  - Announced 800MHz, 1GB / 2GB UDIMM Intel Validation

### 2007

#### 2007

- 11** · Signed a partnership agreement with Siliconfile Technologies Inc. to cooperate on CMOS Image Sensor business
  - Acquired Intel validation for 1Gb DDR2 DRAM
  - Developed industry's first 1Gb GDDR5 DRAM
- 10** · Signed PRAM technology and licensing agreement with Ovonyx
- 09** · Developed world's first 24 stack NAND Flash multi-chip package
- 08** · Signed ZRAM technology and licensing agreement with Innovative Silicon
  - Developed industry's fastest, smallest 1Gb Mobile DRAM

p\_17

## 2007

- 05 · Acquired the industry's first validation on DDR3 DRAM from Intel
- 03 · Signed cross licensing agreement with Sandisk and signed MOU for joint development of x4 NAND Flash technology
  - Developed the world's fastest ECC Mobile DRAM
- 01 · Founded sales subsidiary in India (HSIS)
  - Developed world's fastest memory module based on 'wafer level package' technology

## 2006~2004

- 2006
  - 12 · Announced industry's first 60nm 1Gb DDR2 800MHz based modules
    - Developed the world's fastest 200MHz 512Mb Mobile DRAM
  - 09 · Opened 300mm R&D (3R) fab in Icheon
  - 04 · Founded manufacturing company in China (HSMC)
- 2005
  - 04 · Established JV with ST Micro in China (HSSL)
  - 01 · Signed strategic alliance with ProMOS
- 2004
  - 10 · Transferred non-memory product lines to MagnaChip Semiconductor Ltd.
  - 08 · Signed cooperative agreement with Wuxi City, China to build chip plant

## 2003~1983

- 2003
  - 06 · Established Environment / Safety / Health Lab
  - 04 · Established strategic joint development alliance with STMicro for NAND Flash
- 2001
  - 03 · Changed corporate name to 'Hynix Semiconductor Inc.'
- 1999
  - 10 · Merged with LG Semicon
- 1983
  - 02 · Established Hyundai Electronics Industries Co., Ltd.

# Main Memory

## DDR3

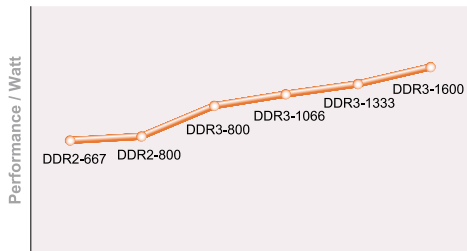

## DDR3

### General Description

The next generation main memory standard, DDR3 SDRAM, can transfer data twice as fast as the current generation DDR2 DRAM's. DDR3 SDRAM boasts high performance and low power consumption. It supports data transfer rate up to 1.6Gb/s and operates at a lower power supply voltage of 1.5V compared to DDR2. The DDR3 SDRAM is eco-friendly for it can operate at even lower voltage of 1.35V contributing to lower power dissipation and extended battery life in mobile systems. The low-power operation is also of benefit to high-density memory systems such as servers and data centers.

Hynix plans to offer DDR3 densities from 1Gb to 4Gb, and is currently supporting up to 2Gb DDR3. Hynix's DDR3 modules exploit functions such as ZQ calibration, fly-by topology, dynamic on-die-termination, and levelization to ensure better signal integrity which guarantees higher performance.

### DDR2 vs. DDR3 Performance / Watt Comparison

Source : Hynix Technical Marketing

### DDR2 vs. DDR3

Subject	DDR2	DDR3
Data Rate	400, 533, 667, 800 Mbps	800, 1066, 1333, 1600 Mbps
VDD / VDDQ	1.8V ± 0.1V	1.5V ± 0.075V
Support Density	256Mb ~ 4Gb	512Mb ~ 4Gb
Bank	512Mb : 4 Bank / 1Gb : 8 Bank	8 Bank
Data Pre-fetch	4 bit	8 bit
Package Type	60FBGA for x4 / x8, 84FBGA for x16	78FBGA for x4 / x8, 96FBGA for x16
Interface	SSTL-18	SSTL-15
DQS Signaling	Single / Differential	Differential Only
Driver Calibration	Off-Chip Driver Calibration	Self calibration with ZQ pin
DQS-CLK De-skewing	No	Yes (Write Leveling)
On Die Termination	Yes	Yes / Dynamic ODT
Reset pin	No	Yes (Soft power-up)

Experience High Speeds!

### Key Features of High Speed Interface

# Main Memory

## PC memory & Server Memory

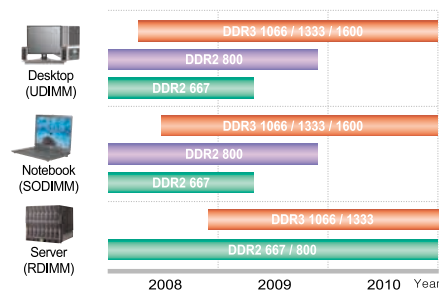

### General Description

It is well known that demand for Notebook PCs has exceeded Desktop PCs. Users now demand a powerful, full-featured mobile system, with low power consumption, extended battery life and connectivity. New portable form factors such as Netbook have emerged in the PC market. Relatively low price point is the primary driving factor, especially in light of the current global economic conditions. Mobility and weight are other features that make this product attractive to consumers.

Servers are now consolidating and adopting Virtualization technology to lower TCO (Total Cost of Ownership), with lower hardware costs and efficiencies. Higher speeds and higher density memory would be key requirements in a Virtualized server environment.

### DDR2 / DDR3 Speed Migration

Hynix has always been at the leading edge of memory innovation. Hynix is currently supplying 66nm 1Gb DDR2/DDR3 and has started ramping 54nm 1Gb DDR2/DDR3 production.

Hynix offers DDR3 Registered DIMMs which provide higher memory density, speed and memory bandwidth, and reliability for high performance servers.

Hynix is also developing 1.35V DDR3 RDIMMs for lower power consumption in server platforms.

## SODIMM

Your notebook just got a little lighter and faster. Portable computing applications can benefit from Hynix's proprietary packaging technology used in high density SODIMMs.

### SODIMM Features

- 512MB ~ 4GB DDR3 SODIMMs in volume production
- Industry standard thickness allows easy installation
- Applications include Notebooks in all form factors, Slim PC's, All-in-One PC's and UMPCs
- Speeds up to 800MHz DDR2
- Speeds up to 1600MHz DDR3

## RDIMM

Improve reliability of your server systems with Hynix Registered DIMMs.

### RDIMM Features

- 1GB ~ 16GB DDR3 RDIMMs in volume production
- Industry standard thickness allows easy installation
- Low-power operation for servers and datacenters
- Speeds up to 800MHz DDR2
- Speeds up to 1333MHz DDR3

# Graphics Memory

Experience the Richness  
of Entertainment

## 54nm 1Gb GDDR5 General Information

Product	1Gb GDDR5 (54nm Tech)
Bit Organization	16Bank × 2Mbit × 32 I/O 16Bank × 4Mbit × 16 I/O
Op. Frequency	Up to 7Gbps
Power Supply	VDD(Q) = 1.5V
Package	FBGA 170 ball (12mm × 14mm)
Interface	POD_15
Function	Refresh : 8192 cycle / 32ms CL = 5 ~ 20, BL = 8 Burst Type : Sequential Data Mask @ Write

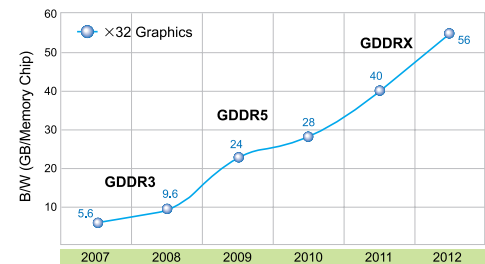

## General Description

Since the introduction of the world's first Graphics DDR SDRAM in 1999, Hynix has played a leadership role in the Graphics memory market by offering cost effective and high performance products.

Last November Hynix introduced the world's fastest 1Gb GDDR5 Graphics DRAM. The newly introduced 1Gb GDDR5 is built on the company's leading edge 54 nm process technology. It operates at 7Gbps which is 40% improvement compared to 66nm 5Gbps GDDR5, and processes up to 28GB/s (Gigabyte per seconds). It is also designed to minimize power consumption at 1.35V power supply. This product is ideal in high-end applications including high-end PC and next generation game consoles which require higher graphic performance and quality to deliver a rich entertainment experience to the end user.

Hynix also supports GDDR3, DDR3 and DDR2 products for performance and mainstream markets.

Hynix will contribute more values for our customers success with the higher performance, quality and technology leadership.

# Consumer Memory

## General Description

We now live in the Digital Era. Digital televisions, DVD and Set-Top Box give us rich entertainment, while Car navigation systems provide comfort and convenience. All of these digital consumer appliances need semiconductor memory for performance improvement, power savings and size reduction.

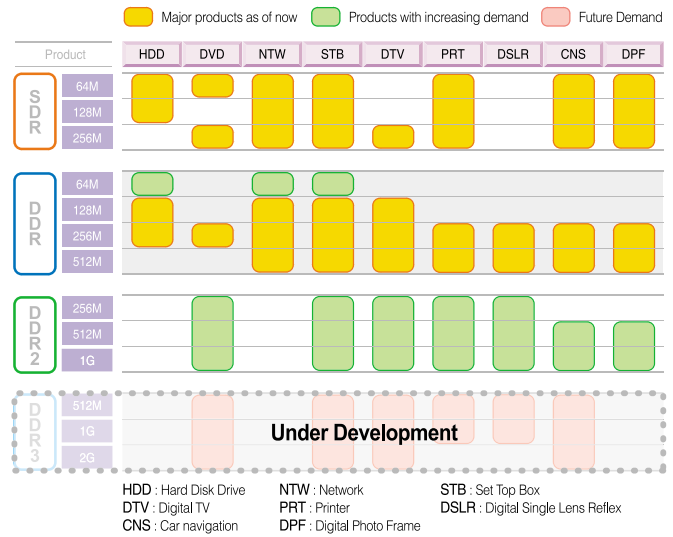

Hynix has full line-up of DRAM (Dynamic RAM) to meet the needs of a wide range of consumer applications. Hynix offers a family of SDRAM (Synchronous DRAM) in 64Mb~256Mb densities, packaged in TSOP-II & FBGA offered at industrial range temperature range of -40°C to 85°C and featuring very low power consumption. DDR & DDR2 SDRAMs (Double Data Rate SDRAMs) are available for high-end consumer applications requiring higher data transfer rates. In many applications, such as Digital Television and Set-Top-Box, SDRAM has been replaced by DDR & DDR2 SDRAM technologies.

**Sometimes, the most important things may not be visible**  
Although hidden from view, Hynix Consumer Memories have been used in a variety of applications offered by a number of companies to realize a multitude of miracles.

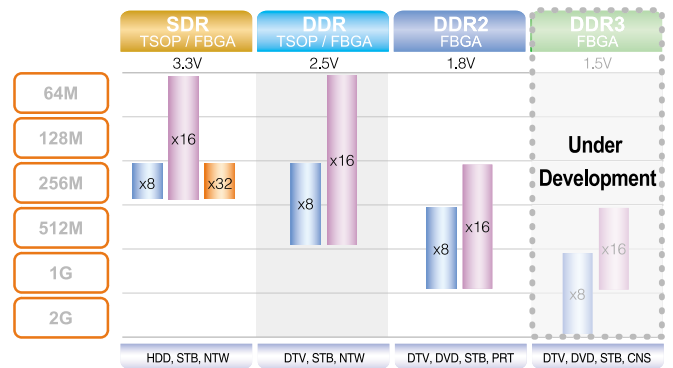

*Good things come in small packages!*

## Consumer DRAM Usage Map

# Mobile Memory

## General Description

Hynix Mobile Memory technology unleashes the best mobile experience on the go. As mobile devices get smaller, sleeker, and lighter than ever, consumers will be able to choose from a wide range of mobile devices to keep them connected, entertained, informed, and productive. As consumers' life styles become more mobile, there is ever increasing demand for connectivity. Mobile devices will require high performance memories, with very low power consumption for extended battery life. Devices that use Hynix Mobile Memory enables everything you love on-the-go. Hynix Mobile Memory products offered in small footprint packages have superior power saving features useful in all handheld devices such as cellular phones, PDAs, MP3 players, etc. Hynix Mobile Memories are ideal for portable applications which require very low power consumption. Hynix's Mobile Business Group offers a broad variety of products enabling our customers to deliver next-generation devices in time to market.

## Mobile DRAM

- **Broad Product Line:** SDR / DDR, x16 / x32 organizations, 128Mb to 2Gb densities
- **Diverse Packaging Options:** Discrete, KGD (Known Good Die), MCP (Multi Chip Package), PoP (Package on Package), Ci-MCP (Card Interface MCP)
- **Small Form Factor Packages:** For use in the most space-constrained handheld applications
- **Low Power Features:** Programmable Drive strength, Partial Array Self Refresh, Auto Temperature Compensated Self Refresh mode
- **Major Applications:** Mobile Phone, PDA, MP3 Player, Digital Still Camera, MID (Mobile Internet Device), PND (Portable Navigation Device), Personal Media Player (PMP), Handheld Game Console

## MCP

- Small Form Factor package saves space in Handheld Devices
- High Capacity Data Storage, High Speed, with Low Power Consumption
- In-house manufacturing provides cost efficient solutions in a timely manner
- Major Application - Mobile Phone, Smartphone, PDA Phone, Digital Still Camera, MID (Mobile Internet Device), Wireless LAN Card, Handheld Game Console

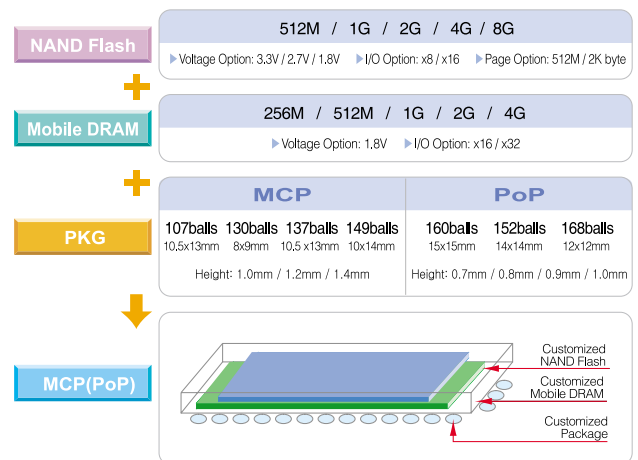

## e-NAND

- e-NAND : Combination of NAND Flash and the Flash Controller with MMC interface, in a single package
- Simple read/write memory using standard MMC 4.2 protocol interface.
- No additional firmware for NAND management required
- Controller includes NAND software such as FTL, ECC, FAT-16/32

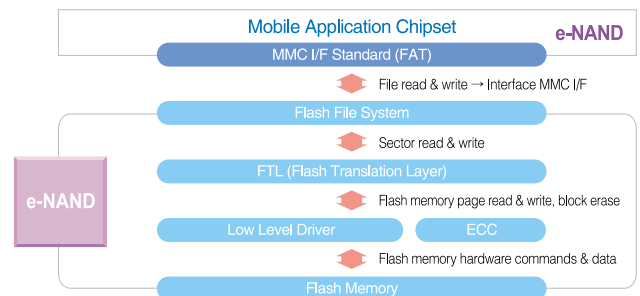

Enhanced Mobility  
with Small Components!

# NAND Flash Memory

## General Description

Hynix provides a broad range of NAND Flash products density from 128Mb to 256Gb with various types of packaging. (TSOP, ULGA and FBGA) Due to the proliferation of digital content, NAND Flash memory products are used in a wide variety of applications such as MP3, PMP, Digital camera, Camcorder, Memory card, USB flash drive and other consumer electronics such as Game console, Navigation. Currently, Hynix NAND Flash Memory is being widely adopted in the mobile handset application and we are also developing PC storage solutions based on the NAND Flash chips. To meet the growing demand for high capacity and improved performance in mobile applications, Hynix is offering HiFFS(Flash File System) software with eHiFFS system that enhances NAND chip performance and reliability.

## NAND Flash Key Features

Product		48nm 16Gb MLC	41nm 32Gb MLC	3xnm 32Gb MLC
Voltage		3.3V	3.3V	3.3V
Organization		× 8	× 8	× 8
Page & Block size (byte)		4KB + 128B / 512KB	4KB + 224B / 512KB	8KB + 436B / 1MB
tRC (min.) / tWC (min.)	25ns	25ns	25ns	30ns
tR (max)		60us	60us	400us(max)
Program time (typ)		< 800us	1000us(TBD)	1600us(TBD)
Erase time (typ)		2.5ms	2.5ms	1.5ms
Operating Current (ICC)	MONO / DDP	15(typ.) ~ 30mA(max)	20(typ.) ~ 40mA(max)	30(typ.) ~ 50mA(max)
	QDP / DSP	20(typ.) ~ 40mA(max)	20(typ.) ~ 40mA(max)(TBD)	30(typ.) ~ 50mA(max)
Function	Copy-back	O with Data out	O with Data out	O with Data out
	Cache program	-	O	O
	Cache Read	-	O	O
	2 plane Op.	Write, Read & Erase	Write, Read & Erase	Write, Read & Erase
Special Function	Extended Data Out	O	O	O
	OTP	O	O	O
	Unique ID	O	O	O

## Endurance / PKG

EW Cycles / Retention	5K / 10years	5K / 10years	TBD
NOP	1	1	TBD
PKG	TSOP / ULGA / DSP	VLGA	VLGA(TBD)

## Software Support

### HiFFS Software

- The management of data on NAND Flash memory is complicated due to limitations of NAND Flash memory.
- One of the most important limitations of NAND Flash memory is the inability to rewrite data without block erase.
- HiFFS Software solution is required to compensate for erase cycle limitations. Additionally, it extends the life of Hynix NAND Flash with wear-leveling algorithms.
- eHiFFS is the software solution for mobile embedded systems. It is an essential system software for consumer applications including Smart phones, PDAs, MP3 player, PMPs, Digital TVs and Digital Camcoders.

### eHiFFS Software

eHiFFS software supports partition manager, logical to physical mapping, wear-leveling, bad block management and prevents read disturbance.

➔ High Performance / High Reliability / Ease of Portability

- **Host Interface**
  - Supports various host interfaces ( ONFI BA, LBA, eMMC etc...)
  - Option for additional features
- **Robust Flash Management with Hynix proprietary Software (eHiFFS)**
- **High performance interface optimized for Hynix NAND Flash**

NAND Flash Storage  
for Fun and Excitement!

# CIS (CMOS Image Sensor)

## General Description

Hynix entered the CMOS Image Sensor business in 2007, to continue with its long term growth strategy. Through close cooperation with industry-leading business partners and with its expertise in the memory business, Hynix successfully introduced competitive and cost effective image sensors in the following year. Hynix aims to diversify its product portfolio by developing a wide range of higher resolution application-specific products to meet market demand.

## Applications

## CMOS Image Sensor

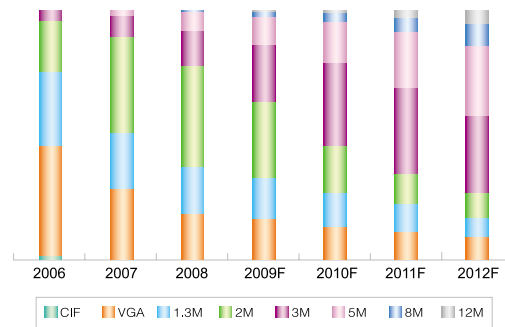

CMOS Image Sensor is a device that converts an optical image to an electrical signal using a CMOS manufacturing technology. CMOS technology allows the integration of the image sensor and digital signal processor on the same chip, resulting in faster, smaller, cost effective and lower power image sensing devices.

CMOS Image Sensor market has high growth potential, with demand expected to rise by 10 percent annually through 2011. Its main applications are camera phones, digital still cameras, and video conferencing systems, but the market for CMOS Image Sensor is rapidly diversifying into various applications including surveillance systems, automotive cameras, and medical system.

## Camera Attachment Ratio of Mobile Phones

## Camera Phone Resolution Trend (Main Camera)

## Hynix CMOS Image Sensor

Hynix is now offering CMOS Image Sensors for various consumer applications, delivering outstanding performance and providing innovative and cost-effective solutions. Hynix is continuously enhancing its technological excellence accelerating technology development to provide quality products and meet customers needs.

## Hynix CMOS Image Sensor Pixel Technology Migration

Experience Clear and Vivid Images with Hynix CMOS Image Sensors

## CIS(CMOS Image Sensor) Product Line-up

### CMOS Image Sensor Product Lineup and Key Features

VGA (YACBAA0S)			
Pixel Size	2.25um × 2.25um	Sensitivity	0.750V / LuxSec
Array Format (Active)	640H × 480V	SNR	35dB
Optical Format	1/10-inch	Dynamic Range	60dB
Imaging Area	1.44mm × 1.08mm	ADC	on-chip, 10-bit
Color Filter Array	RGB Bayer color filters	Data Rate	12 megapixels per second (master clock, 24MHz)
Scan Mode	Progressive	Programmable	Exposure, white balance, blanking, vertical blanking, color, sharpness, gamma correction, lens shading correction, X-Y image flip, zoom, windowing
Frame Rate	30-fps @ 24MHz		
Shutter	Electronic rolling Shutter (ERS)	Supply Voltage	Digital I/O: 1.7V ~ 3.0V Digital Core: 1.7V ~ 1.9V Analog & Pixel: 2.6V ~ 3.0V
Automatic Function	Exposure, white balance, black level calibration, anti-flicker, color saturation, defect correction, aperture correction		
Window size	Programmable (including VGA, QVGA, CIF, QCIF)	Power Consumption	100mW (Typical)
Flash Support	Xenon and LED	Operating Temp. Range	-20°C to 70°C

2M (YACD5B1S)			
Pixel Size	1.75um × 1.75um	Sensitivity	TBD
Optical Format	1/5-inch	SNR	32dB (est.)
Array Format (Active)	1600H × 1200V	ADC	on-chip, 10-bit
Imaging Area	2.80mm × 2.10mm	Data Rate	36 megapixels per second (Internal PLL clock = 72MHz)
Color Filter Array	RGB Bayer color filters	Programmable	Exposure, white balance, blanking, vertical blanking, color, sharpness, gamma correction, lens shading correction, X-Y image flip, zoom, windowing
Scan Mode	Progressive		
Frame Rate	Max 15-fps @ full resolution	Supply Voltage	Digital I/O: 1.7V ~ 3.0V Digital Core: 1.7V ~ 1.9V Analog & Pixel: 2.6V ~ 3.0V
Shutter	Electronic rolling Shutter (ERS)		
Automatic Function	Exposure, white balance, black level calibration, anti-flicker, color saturation, defect correction, aperture correction	Power Consumption	TBD
Window size	Programmable (including UXGA, SVGA, QSVGA)	Operating Temp. Range	-20°C to 70°C
Flash Support	Xenon and LED		

3M (YACE4A1S)			
Pixel Size	1.75um × 1.75um	SNR	32dB (est.)
Optical Format	1/4-inch	ADC	On-chip, 10-bit
Array Format (Active)	2048H × 1356V	Programmable	Exposure, white balance, blanking, vertical blanking, color, sharpness, gamma correction, lens shading correction, X-Y image flip, zoom, windowing
Imaging Area	TBD		
Color Filter Array	RGB Bayer color filters	Frame Rate	15-fps @ QXGA / 30-fps @ XGA
Scan Mode	Progressive		
Flash Support	Xenon and LED	Shutter	Electronic rolling Shutter (ERS)
Automatic Function	Exposure, white balance, black level calibration, anti-flicker, color saturation, defect correction, aperture correction, Anti-Shaking, Auto Focus Control		
Window size	Programmable	Supply Voltage	Digital I/O: 1.7V ~ 3.0V Digital Core: 1.7V ~ 1.9V Analog & Pixel: 2.6V ~ 3.0V
Sub-Sampling	1/2, 1/4		
Sensitivity	0.475V / lux-sec @ 550nm (est.)	Power Consumption	80mW (Active)
		Consumption	7μ A (Standby)
		Operating Temp. Range	-20°C to 60°C

5M (YACF3A1C)			
Pixel Size	1.75um × 1.75um	ADC	On-chip, 10-bit
Optical Format	1/3.2 inch	Dynamic Range	TBD
Array Format (Active)	2624H × 1984V	Feature	DPC, Programmable BLC, LCS, Analog / Digital Gain Control, X-Y Flip, Windowing, Sub-sampling, Scaling, Slew Rate control, Exposure Control, Xenon / LED Support
Imaging Area	4.59mm × 3.47mm		
Color Filter Array	RGB Bayer color filters	Shutter	Electronic rolling Shutter (ERS) With Global Reset Release
Flash Support	Xenon and LED		
Scan Mode	Progressive	Supply Voltage	Digital I/O: 1.6V ~ 3.1V Digital Core: 1.8V ±10% Analog & Pixel: 2.6V ~ 3.1V
Frame Rate	15-fps @ QSXGA (Full Resolution)		
Sub Sampling	-	Power Consumption	<350mW
Operating Temp. Range	-10°C to 70°C	Serial Interface	Yes
Data Interface Format	Bayer (10-bit), MIPI		
Sensitivity	TBD		
SNR	TBD
