*1 (): Conventional Type No.

★ Operating temperature range : $-55^{\circ}\text{C} \sim +125^{\circ}\text{C}$

★ E-96 series resistance values are available for D class F class.

★ Please apply the rated voltage or lower.

$$\text{Rated voltage is calculated by } E = \sqrt{PR}$$

E = Rated Voltage (V)

P = Rated Power (W)

R = Resistance (Ω)

★ In case rated voltage calculation is excess of maximum working voltage, maximum or lower voltage be applied.

*1 (): Conventional Type No.

Power rating

For resistors operated in ambient temperature above 70 °C, power rating must be derated in accordance with the derating curve.

Surface temperature

Surface temperature rise is shown in this figure.

Please notice that CR50 and CR64 have high temperature rise when Loaded 100%.
