Correct Use of Tantalum Chip Capacitors

Be sure to read this before using NEC TOKIN Tantalum Capacitors.

[Notes]

- Be sure to read "Notes on Using The Solid Tantalum Capacitor" (p34 - p42) and "Cautions" (p43) before commencing circuit design or using the capacitor.
- Confirm the usage conditions and rated performance of the capacitor before use.
- Ninety percent of the failure that occurs in this capacitor is caused by an increase in leakage current or short-circuiting. It is therefore important to make sufficient allowances for redundant wiring in the circuit design.

[Quality Grades]

NEC TOKIN devices are classified into the following quality grades in accordance with their application (for details of the applications, see p43). **The quality grade of all devices in this document is "standard"; the devices in this document cannot be used for "special" or "specific" quality grade applications. Customers who intend to use a product or products in this document for applications other than those specified under the "standard" quality grade must contact NEC TOKIN sales representative in advance (see the reverse side of the cover for contact details).**

- **Standard:** This quality grade is intended for applications in which failure or malfunction of the device is highly unlikely to cause harm to persons or damage to property, or be the source of any negative effects or problems in the wider community.
- **Special:** This quality grade is intended for special applications that have common requirements, such specific industrial fields. Devices with a "special" quality grade are designed, manufactured, and tested using a more stringent quality assurance program than that used for "standard" grade devices. There is a high possibility that failure or malfunction of the device when being used for applications in this category will cause harm to persons or damage to property, or create negative effects or problems in the wider community.
- **Specific:** Devices with a "specific" quality grade are designed, manufactured, and tested using a quality assurance program that is designated by the customer or that is created in accordance with the customer's specifications. There is an extremely high possibility that failure or malfunction of the device when being used for applications in this category will cause harm to persons or damage to property, or create serious problems in the wider community. Customers who use NEC TOKIN's products for these "specific" applications must conclude an individual quality agreement and/or development agreement with NEC TOKIN. A quality assurance program designated by the customer must also be determined in advance.

NEC TOKIN offers the latest technology

<Tantalum Capacitors>

<Conductive Polymer Tantalum Capacitors> "NeoCapacitors"

NEC has been manufacturing solid electrolyte tantalum capacitors for more than 30 years. As a result of NEC's active research and development programs, NEC capacitors offer the designer the latest technology plus outstanding performance. NEC capacitors are used extensively in industrial, commercial, entertainment, and medical electronic equipment. NEC has obtained ISO 9001 and QS9000 certificates of registration for capacitors. NEC, in response to the wave of the worldwide environment protection consciousness, developed E/SV series by eliminating lead from the terminals.

The low-ESR conductive polymer tantalum capacitors are expected to meet an important market need; they are suited for DC/DC converters, video cameras, personal handy phones, etc.

The business of manufacturing and sale of capacitors was divided and transferred to Tokin, as of April 1, 2002. Then Tokin changed its corporate name to "NEC TOKIN Corporation," which has charge of electronic components business within the NEC Group.

TANTALUM CAPACITORS

Description

NEC TOKIN's tantalum capacitors offer the designer advanced technological design and excellent performance characteristics for filtering, bypassing, coupling, decoupling, blocking, and R C timing circuits. They are used extensively in industrial, commercial, entertainment, and medical electronic equipment.

The tantalum capacitor is inherently very reliable and there is significant evidence that this reliability improves with age—perhaps indefinitely. Capacitance loss with age and other problems often associated with liquid electrolytes are nonexistent in solid electrolyte tantalums.

A process used to further improve the reliability of tantalums is to burn them in at elevated voltages at 85°C for extended periods of time, thus eliminating high leakage and other undesirable characteristics. This process is done because solid electrolyte tantalum capacitors do not conform to the exponential distribution of time ordered failures, but instead exhibit a constantly decreasing failure rate.

If you specify NEC TOKIN tantalums, you can feel confident that you are getting the best available quality, reliability, and price.

TANTALUM CHIP CAPACITORS

Conventional Type (Manganese Dioxide Type)						Lead-free/Conform to RoHS	
Series	Operating Temperature Range (°C)	DC Rated Voltage Range (V)	Capacitance Range (μF)	Capacitance Tolerance (%)	DC Leakage Current (μA)	Dissipation Factor (%)	Features
E/SV	–55 to +125	2.5 to 35	0.47 to 680	±20 or ±10 (P, J case; ±20)	0.01 CV ⁽¹⁾ or 0.5 whichever is greater	2.5 Vdc to 10 Vdc ⁽²⁾ : 8 to 30 16 Vdc to 35 Vdc : 4 to 15	(Standard Miniaturized Ultra miniaturized)
F/SV	–55 to +125	2.5 to 4	33 to 47	±20	0.01 CV ⁽¹⁾ or 0.5 whichever is greater	30	(Face down terminal Ultra miniaturized Large Capacitance)
SV/Z	–55 to +125	4 to 35	6.8 to 330	±20 or ±10	0.01 CV ⁽¹⁾ or 0.5 whichever is greater	6 to 14 ⁽³⁾	Low ESR
NeoCapacitor (Conductive Polymer Type)						Lead-free/Conform to RoHS	
PS/L	–55 to +105	2.5 to 16	2.2 to 1000	±20	0.1 CV ⁽¹⁾ or 3, (J case:10) whichever is greater	4 to 10 ⁽⁴⁾	Ultra-low ESR
PS/G	–55 to +105	2.5	330 to 680	±20	0.1 CV ⁽¹⁾ or 3, whichever is greater	10	Ultra-low ESR (Single digit ESR)

- Notes**
1. Product of capacitance in μF and voltage in V.
 2. Refer to Standard Ratings on page 9, 10, 11.
 3. Refer to Standard Ratings on page 16.
 4. Refer to Standard Ratings on pages 25, 26.

E/SV Series Tantalum Chip Capacitors

■ FEATURES

- Lead-free Type. In conformity to RoHS.
- Offer a range of small, high-capacity models.
- Succeed to the latest technology plus outstanding performance.

■ PERFORMANCE CHARACTERISTICS

Test Conditions : Conform to IEC 60384-1

ITEM		PERFORMANCE							TEST CONDITION	
Operating temperature		-55°C to +125°C							Derate voltage at 85°C at more	
Rated voltage (V.dc)		2.5V	4V	6.3V	10V	16V	20V	25V	35V	at 85°C
Derated voltage (V.dc)		1.6V	2.5V	4V	6.3V	10V	13V	16V	22V	at 125°C
Surge voltage (V.dc)		3.3V	5.2V	8V	13V	20V	26V	33V	46V	at 85°C
Capacitance		0.47 μF to 680 μF							at 120 Hz	
Capacitance tolerance		±20% or ±10% (P,J case: ±20%)								
DC Leakage Current (L.C)		0.01C • V(μA) or 0.5 μA , whichever is greater							Voltage: Rated voltage for 5min.	
Dissipation Factor		Refer to Standard Ratings							at 120 Hz	
Equivalent Series Resistance		Refer to Standard Ratings							at 100 kHz	
		Capacitance change		DF(%)		L.C				
Surge voltage test		Refer to Standard Ratings		Lower than initial specification		Lower than initial specification			Temperature : 85±2°C Applied voltage : Surge voltage Series resistance : 33 ohm Duration of surge : 30±5 sec Time between surge : 5.5min. Number of cycle : 1000	
Characteristic at high and low temperature	-55°C	Not to exceed -20% (P, J case) or -12%		Refer to Standard Ratings		—————			Step 1: 25±2°C Step 2: -55.0°C Step 3: 25±2°C Step 4: 125.0°C	
	+85°C	Not to exceed +20% (P, J case) or +12%		Lower than initial specification		0.1C•V(μA) or 5μA, which ever is greater				
	+125°C	Not to exceed +20% (P, J case) or +15%		Refer to Standard Ratings		0.125C•V(μA) or 6.25μA, which ever is greater				
Rapid change of temperature		Refer to Standard Ratings		Lower than initial specification		Lower than initial specification			Parts shall be temperature cycled over a temperature range of -55 to +125°C, five times continuously as follow. Step 1: -55.0 °C, 30±3min. Step 2: room temp. , 10 to 15min. Step 3: 125.0°C, 30±3min. Step 4: room temp, 10 to 15min.	
Resistance to Soldering heat		Refer to Standard Ratings		Lower than initial specification		Lower than initial specification			solder dip : 260°C, 5sec solder reflow : 260°C,10sec	
Damp heat		Refer to Standard Ratings		Lower than 1.5 times initial specification		Lower than initial specification			at 40°C at 90 to 95% RH 500 hour	
Endurance		Refer to Standard Ratings		Lower than initial specification		Lower than 2 times initial specification (P, J case) or 1.25 times initial specification			at 85°C: Rated voltage at 125°C: Derated voltage 2000 hour	
Failure Rate		λ0=1% / 1000 hour							at 85°C: Rated voltage at 125°C: Derated voltage 2000 hour	
Terminal Strength		Visual: There shall be no evidence of mechanical damage							Strength : 4.9N Time : 10±0.5sec. (two directions)	

Reference : Derated voltage (85 to 125°C)

$$[U_T] = [U_R] - \frac{[U_R] - [U_C]}{40} (T-85)$$

[U_T] : Derated voltage at operating temperature

[U_R] : Rated voltage

[U_C] : Derated voltage at 125°C

T : Ambient temperature

F/SV Series Tantalum Chip Capacitors

New Product

■ FEATURE

- Lead-free type. In conformity to RoHS.
- Face down terminal
- The low-profile of height 0.9mm Max and large capacitance of 47 μ F available in 1608 size.
- Enable fillet bonding

■ DIMENSIONS

(Unit: mm)

■ PERFORMANCE CHARACTERISTICS

Test Conditions : Conform to IEC 60384-1

ITEM		PERFORMANCE						TEST CONDITION	
Operating temperature		-55°C to +125°C						Derate voltage at 85°C at more	
Rated voltage (V.dc)		2.5V	4V	[6.3V]	[10V]	[16V]	[20V]	[25V]	at 85°C
Derated voltage (V.dc)		1.6V	2.5V	[4V]	[6.3V]	[10V]	[13V]	[16V]	at 125°C
Surge voltage (V.dc)		3.3V	5.2V	[8V]	[13V]	[20V]	[26V]	[33V]	at 85°C
Capacitance		33 μF to 47 μF						at 120 Hz	
Capacitance tolerance		±20%							
DC Leakage Current (L.C)		0.01C • V(μA) or 0.5μA , whichever is greater						Voltage: Rated voltage for 5min.	
Dissipation Factor		Refer to Standard Ratings						at 120 Hz	
Equivalent Series Resistance		Refer to Standard Ratings						at 100 kHz	
		Capacitance change		DF(%)		L.C			
Surge voltage test		Refer to Standard Ratings		Lower than initial specification		Lower than initial specification		Temperature : 85±2°C Applied voltage : Surge voltage Series resistance : 33 ohm Duration of surge : 30±5 sec Time between surge : 5.5min. Number of cycle : 1000	
Characteristic at high and low temperature	-55°C	Not to exceed -20%		Refer to Standard Ratings		————		Step 1: 25±2°C Step 2: -55.0°C Step 3: 25±2°C Step 4: 125.0°C	
	+85°C	Not to exceed +20%		Lower than initial specification		0.1C•V(μA) or 5μA, which ever is greater			
	+125°C	Not to exceed +20%		Refer to Standard Ratings		0.125C•V(μA) or 6.25μA, which ever is greater			
Rapid change of temperature		Refer to Standard Ratings		Lower than initial specification		Lower than initial specification		Parts shall be temperature cycled over a temperature range of -55 to +125°C, five times continuously as follow. Step 1: -55.0 °C, 30±3min. Step 2: room temp. , 10 to 15min. Step 3: 125.0°C, 30±3min. Step 4: room temp, 10 to 15min.	
Resistance to Soldering heat		Refer to Standard Ratings		Lower than initial specification		Lower than initial specification		solder dip : 260°C, 5sec solder reflow : 260°C, 10sec	
Damp heat		Refer to Standard Ratings		Lower than 1.5 times initial specification		Lower than initial specification		at 40°C at 90 to 95% RH 500 hour	
Endurance		Refer to Standard Ratings		Lower than initial specification		Lower than 2 times initial specification		at 85°C : Rated voltage at 125°C : Derated voltage 2000 hour	
Failure Rate		λ0=1% / 1000 hour						at 85°C: Rated voltage at 125°C: Derated voltage 2000 hour	
Terminal Strength		Visual: There shall be no evidence of mechanical damage						Strength : 4.9N Time : 10±0.5sec. (two directions)	

[] : Under development

Reference : Derated voltage (85 to 125°C)

$$[U_T] = [U_R] - \frac{[U_R] - [U_C]}{40} (T-85)$$

[U_T] : Derated voltage at operating temperature

[U_R] : Rated voltage

[U_C] : Derated voltage at 125°C

T : Ambient temperature

■ CHARACTERISTICS (reference)

Impedance-frequency characteristics

ESR-frequency characteristics

SV/Z Series Tantalum Chip Capacitors (Low-ESR Type)

■ FEATURES

- Lead-free Type. In conformity to RoHS.
- Low-ESR Type.
- For decoupling with CPU, for absorbing the noise.
- Same Dimension as E/SV series.

PART NUMBER SYSTEM

[Bulk]

SVZ D 1C 107 M

- SVZ Series
- Case code
- DC rated voltage in volts
(0G: 4 V, 0J: 6.3 V, 1A: 10 V, 1C: 16 V)
(1D: 20 V, 1E: 25 V, 1V: 35 V)
- Capacitance (pF)
(First two digits represent significant figures.
Third digit specifies number of zeros to follow.)
- Capacitance Tolerance
(M: ±20%)

[Tape and Reel]

TE SVZD1C107M 12 R E

- Tape and Reel
(TE: 180mm ϕ reel)
- Part number of Bulk
- Tape width
(8: 8 mm (A, B2 case)
12: 12 mm (C, V, D cases))
- Packing Orientation
(R: Cathode on the Side of Sprocket Hole)
- Indicates 330mm ϕ reel
(TL: 330mm ϕ reel)

■ MARKINGS

The standard marking shows capacitance, DC rated voltage, and polarity.

[A case] (ex. 10 μ F / 6.3 V)

[B2 case] (ex. 22 μ F / 6.3 V)

[C, V, D case] (ex. 220 μ F / 10 V)

■ PERFORMANCE CHARACTERISTICS

Test Conditions : Conform to IEC 60384-1

ITEM		PERFORMANCE						TEST CONDITION	
Operating temperature		-55°C to +125°C						Derate voltage at 85°C at more	
Rated voltage (V.dc)		4V	6.3V	10V	16V	20V	25V	35V	at 85°C
Derated voltage (V.dc)		2.5V	4V	6.3V	10V	13V	16V	22V	at 125°C
Surge voltage (V.dc)		5.2V	8V	13V	20V	26V	33V	46V	at 85°C
Capacitance		6.8 μF to 330 μF						at 120 Hz	
Capacitance tolerance		±20% or ±10%							
DC Leakage Current (L.C)		0.01C • V(μA) or 0.5μA , whichever is greater						Voltage: Rated voltage for 5min.	
Dissipation Factor		Refer to Standard Ratings						at 120 Hz	
Equivalent Series Resistance		Refer to Standard Ratings						at 100 kHz	
		Capacitance change		DF(%)		L.C			
Surge voltage test		Refer to Standard Ratings		Lower than initial specification		Lower than initial specification		Temperature : 85±2°C Applied voltage : Surge voltage Series resistance : 33 ohm Duration of surge : 30±5 sec Time between surge : 5.5min. Number of cycle : 1000	
Characteristic at high and low temperature	-55°C	Not to exceed -12%		Refer to Standard Ratings		—————		Step 1: 25±2°C Step 2: -55.0°C Step 3: 25±2°C Step 4: 125.0°C	
	+85°C	Not to exceed +12%		Lower than initial specification		0.1C • V(μA) or 5μA, which ever is greater			
	+125°C	Not to exceed +15%		Refer to Standard Ratings		0.125C • V(μA) or 6.25μA, which ever is greater			
Rapid change of temperature		Refer to Standard Ratings		Lower than initial specification		Lower than initial specification		Parts shall be temperature cycled over a temperature range of -55 to +125°C, five times continuously as follow. Step 1: -55.0 °C, 30±3min. Step 2: room temp. , 10 to 15min. Step 3: 125.0°C, 30±3min. Step 4: room temp, 10 to 15min.	
Resistance to Soldering heat		Refer to Standard Ratings		Lower than initial specification		Lower than initial specification		solder dip : 260°C, 5sec solder reflow : 260°C, 10sec	
Damp heat		Refer to Standard Ratings		Lower than 1.25 times initial specification		Lower than initial specification		at 40°C at 90 to 95% RH 500 hour	
Endurance		Refer to Standard Ratings		Lower than initial specification		Lower than 1.25 times initial specification		at 85°C : Rated voltage at 125°C : Derated voltage 2000 hour	
Failure Rate		λ0 = 1% / 1000 hour						at 85°C : Rated voltage at 125°C : Derated voltage 2000 hour	
Terminal Strength		Visual: There shall be no evidence of mechanical damage						Strength : 4.9N Time : 10±0.5sec. (two directions)	

Reference : Derated voltage (85 to 125°C)

$$[U_T] = [U_R] - \frac{[U_R] - [U_C]}{40} (T - 85)$$

[U_T] : Derated voltage at operating temperature[U_R] : Rated voltage[U_C] : Derated voltage at 125°C

T : Ambient temperature

■ PERFORMANCE CHARACTERISTICS

Test Conditions : Conform to IEC 60384-1

ITEM		PERFORMANCE					TEST CONDITION	
Operating temperature		-55°C to +105°C					Derate voltage at 85°C at more	
Rated voltage (V.dc)		2.5V	4V	6.3V	10V	16V	[20V]	at 85°C
Derated voltage (V.dc)		2V	3.3V	5V	8V	12.8V	[16V]	at 105°C
Surge voltage (V.dc)		3.3V	5.2V	8V	13V	20V	[26V]	at 85°C
Capacitance		2.2 μF to 1000 μF					at 120 Hz	
Capacitance tolerance		±20%						
DC Leakage Current (L.C)		0.1C • V(μA) or 3μA (J case:10μA) , whichever is greater					Voltage: Rated voltage for 5min.	
Dissipation Factor		Refer to Standard Ratings					at 120 Hz	
Equivalent Series Resistance		Refer to Standard Ratings					at 100 kHz	
		Capacitance change		DF(%)		L.C		
Surge voltage test		Refer to Standard Ratings		Lower than initial specification		Lower than initial specification		Temperature : 85±2°C Applied voltage : Surge voltage Series resistance : 33 ohm Duration of surge : 30±5 sec Time between surge : 5.5min. Number of cycle : 1000
Characteristic at high and low temperature	-55°C	from 0 to -20%		Lower than initial specification		————		Step 1: 25±2°C Step 2: -55.0°C Step 3: 25±2°C Step 4: 105.0°C
	+105°C	from 0 to +50%		Lower than 1.5 times initial specification		Lower than 10 times initial specification		
Rapid change of temperature		Refer to Standard Ratings		Lower than initial specification		Lower than initial specification		Parts shall be temperature cycled over a temperature range of -55 to +105°C, five times continuously as follow. Step 1: -55.0 °C, 30±3min. Step 2: room temp. , 10 to 15min. Step 3: 105.0°C, 30±3min. Step 4: room temp, 10 to 15min.
Resistance to Soldering heat		Refer to Standard Ratings		Lower than 1.3 times initial specification		Lower than initial specification		Reflow soldering method 240°C, 10 sec.Max.
Damp heat		from +30% to -20%		Lower than 1.5 times initial specification		Lower than initial specification		at 40°C at 90 to 95% RH 500 hour
Endurance I		Refer to Standard Ratings		Lower than 1.5 times initial specification		Lower than initial specification		at 85°C at rated voltage 1000 hour
Endurance II		Refer to Standard Ratings		Lower than 3 times initial specification		Lower than initial specification		at 105°C at Derated voltage 1000 hour
Failure Rate		λ0 = 1% / 1000 hour					at 85°C: rated voltage at 105°C: derated voltage	
Terminal Strength		Visual: There shall be no evidence of mechanical damage					Strength : 4.9N Time : 10±0.5sec. (two directions)	
Permissible ripple current		Refer to Ratings Table					at 100 kHz	
Other		Conform to IEC60384-1					Conform to IEC60384-1	

Reference : Derated voltage (85 to 125°C)

[] : Under development

$$[U_T] = [U_R] - \frac{[U_R] - [U_C]}{20} (T-85)$$

[U_T] : Derated voltage at operating temperature

[U_R] : Rated voltage

[U_C] : Derated voltage at 105°C

PS/G Series NeoCapacitor

New Product

FEATURE

- Lead-free type. In conformity to RoHS.
- Extreme low ESR (7mhom) and excellent noise absorption performance.
- High capacitance and ultra low ESR based upon on our original Conductive Polymer technology.
- Same outer dimension an conventional PS/L series.

DIMENSIONS

(Unit: mm)

■ PERFORMANCE CHARACTERISTICS

Test Conditions : Conform to IEC 60384-1

ITEM		PERFORMANCE			TEST CONDITION
Operating temperature		-55°C to +105°C			Derate voltage at 85°C at more
Rated voltage (V.dc)		2.5V			at 85°C
Derated voltage (V.dc)		2V			at 105°C
Surge voltage (V.dc)		3.3V			at 85°C
Capacitance		330 μF to 680 μF			at 120 Hz
Capacitance tolerance		±20%			
DC Leakage Current (L.C)		0.1C • V(μA) or 3μA, whichever is greater			Voltage: Rated voltage for 5min.
Dissipation Factor		Refer to Standard Ratings			at 120 Hz
Equivalent Series Resistance		Refer to Standard Ratings			at 100 kHz
		Capacitance change	DF(%)	L.C	
Surge voltage test		Refer to Standard Ratings	Lower than initial specification	Lower than initial specification	Temperature : 85±2°C Applied voltage : Surge voltage Series resistance : 33 ohm Duration of surge : 30±5 sec Time between surge : 5.5min. Number of cycle : 1000
Characteristic at high and low temperature	-55°C	from 0 to -20%	Lower than initial specification	————	Step 1: 25±2°C Step 2: -55. ₃ °C
	+105°C	from 0 to +50%	Lower than 1.5 times initial specification	Lower than 10 times initial specification	Step 3: 25±2°C Step 4: 105. ₃ °C
Rapid change of temperature		Refer to Standard Ratings	Lower than initial specification	Lower than initial specification	Parts shall be temperature cycled over a temperature range of -55 to +105°C, five times continuously as follow. Step 1: -55. ₃ °C, 30±3min. Step 2: room temp. , 10 to 15min. Step 3: 105. ₃ °C, 30±3min. Step 4: room temp, 10 to 15min.
Resistance to Soldering heat		Refer to Standard Ratings	Lower than 1.3 times initial specification	Lower than initial specification	Reflow soldering mehod 240°C, 10 sec.Max.
Damp heat		from +30% to -20%	Lower than 1.5 times initial specification	Lower than initial specification	at 40°C at 90 to 95% RH 500 hour
Endurance I		Refer to Standard Ratings	Lower than 1.5 times initial specification	Lower than initial specification	at 85°C at rated voltage 1000 hour
Endurance II		Refer to Standard Ratings	Lower than 3 times initial specification	Lower than initial specification	at 105°C at Derated voltage 1000 hour
Failure Rate		λ ₀ = 1% / 1000 hour			at 85°C: rated voltage at 105°C: derated voltage

NOTES ON USING THE SOLID TANTALUM CAPACITORS

About 90% of the failure mode of the solid tantalum capacitor is short-circuit.
Please take surplus for the operating condition.

1. Circuit Design

(1) Reliability

The reliability of the solid tantalum capacitor is heavily influenced by environmental conditions such as temperature, humidity, shock, vibration, mechanical stresses, and electric stresses, including applied voltage, current, ripple current, transient current and voltage, and frequency. When using solid tantalum capacitors, therefore, provide enough margin so that the reliability of the capacitors is maintained.

Voltage and temperature are important parameters when estimating the reliability (field failure rate).

The field failure rate of a solid tantalum capacitor can be calculated by the following expression if emphasis is placed only on the voltage and temperature:

$$\lambda = \lambda_0 (V/V_0)^3 \times 2^{(T-T_0)/10}$$

Where

λ : estimated failure rate in actual working condition
temperature: T; voltage: V
 λ_0 : failure rate under rated load (See table below.)
temperature: T₀; voltage: V₀

Failure rate level λ_0 of each series

Series	Failure rate level
PS/L	1%/1000 h
E/SV	1%/1000 h
F/SV	1%/1000 h
PS/G	1%/1000 h
SV/Z	1%/1000 h

<Test conditions>

Temperature: 85°C
Voltage: rated voltage
R_s: 3 Ω

2. Ripple Current and Ripple Voltage

If ripple current is applied, heat is generated within capacitor by Joule's heat (power dissipation) and it may affect to the reliability of the capacitor.

(1) Power Dissipation

The actual power dissipated in the capacitor is calculated using the formula1.

$$P = I^2 \times ESR \text{.....Formura1}$$

$$\left(\begin{array}{l} P : \text{Power Dissipation (Watts)} \\ I : \text{Ripple Current (Arms)} \\ ESR : \text{Equivalent Series Resistance } (\Omega) \end{array} \right)$$

(2) Ripple Current

Using P Max from TABLE1, maximum ripple current I (Arms) may be determined as follow :

$$I = \sqrt{P_{\text{Max}} / ESR} \times K \times F \text{.....Formura2}$$

$$\left(\begin{array}{l} K : \text{Temperature Derating Factor TABLE2} \\ \quad \text{E/SV, F/SV, SV/Z....TABLE2-1,} \\ \quad \text{P/SL, PS/G....TABLE2-2} \\ F : \text{Frequency Derating Factor.....TABLE3} \\ ESR : \text{refer to Ratings} \end{array} \right)$$

Ripple voltage E is calculated using the formura3.

$$E = Z \times I \text{.....Formura3}$$

$$\left(\begin{array}{l} E : \text{Ripple voltage} \\ Z : \text{Impedance at specified frequency} \end{array} \right)$$

(3) Ripple Voltage

The ripple voltage which may be applied is limited by three criteria :

- The power dissipated in the ESR of the capacitor must not exceed the appropriate value specified in TABLE1.
- The sum of the DC voltage and peak value of the ripple voltage must not exceed the rated voltage.
- The negative peak value of the ripple voltage must not exceed the permissible reverse voltage value specified in the following section, Reverse Voltage.

3. Reverse Voltage

- Because the solid tantalum capacitor is of polar type, do not apply a reverse voltage to it.
- The figure on the right shows the relationship between current and reverse voltage.

TABLE 1 Dissipation Ratings

Case Code	Maximum Power Dissipation Watts, 100kHz, at 25°C
J	0.010
P	0.025
A2	0.060
A	0.075
B3	0.075

Temp.	Temperature Derating Factor K
25°C	1
85°C	0.9
105°C	0.4

TABLE 3 Frequency Derating Factor F

Series	10kHz	100kHz	500kHz	1MHz
I	0.80	1.00	1.15	1.20
II	0.75	1.00	1.10	1.30

I : E/SV, F/SV, SV/Z

II : PS/L, PS/G

4. Applied Voltage

- (1) For general applications, apply 70% or less of the rated voltage to the capacitor.
- (2) When the capacitor is used in a power line or a low-impedance circuit, keep the applied voltage within 30% (50% max.) of the rated voltage to avoid the adverse influence of inrush current.
- (3) For conductive polymer type, NeoCapacitor, apply 80% or less of the rated voltage to the capacitor.

Recommended Ratio of Operating Voltage to Rated Voltage

Circuit	Manganese dioxide type E/SV, F/SV, SV/Z series	Conductive polymer type (NeoCapacitor) PS/L, PS/G series
high-impedance	70% or less	80% or less
low-impedance	within 30% (50% max)	80% or less

- (4) Derated voltage at 85°C or more.

When using a Chip-type capacitor at a temperature of 85°C or higher, calculate reduced voltage U_T from the following expression. Note, however, that the ambient temperature must not exceed the maximum operating temperature.

The rated voltage ratio is as shown in the figure on the right.

$$U_T = U_R - \frac{U_R - U_C}{T_{max} - 85} (T - 85)$$

Where

U_R : rated voltage (V)

U_C : derated voltage at 125°C

T : ambient temperature (°C)

T_{max} : Maximum Operating temperature

MnO₂ type E/SV, F/SV, SV/Z 125°C

Conductive Polymer type PS/L, PS/G ... 105°C

5. Current (Series Resistance)

As shown in the figure on the right, reliability is increased by inserting a series resistance of at least 3Ω/V into circuits where current flow is momentary (switching circuits, charge/discharge circuits, etc). If the capacitor is in a low-impedance circuit, the voltage applied to the capacitor should be less than 1/2 to 1/3 of the DC rated voltage.

6. In the Case of Short-Circuit

- (1) Manganese oxide tantalum capacitor (conventional tantalum capacitor) is heated and may generate fire and be burned depending upon its excess current, time and other factors.
- (2) Conductive polymer tantalum capacitor (NeoCapacitor) is heated and may generate smoke emission depending upon its excess current, time and other factors.

(Conductive polymer used for electrolyte is superior in insulating the damaged portion to)
manganese oxide (used in conventional tantalum capacitor).

When designing the circuit, provide as much margin as possible to maintain capacitor reliability.

NOTES ON USING THE CHIP TANTALUM CAPACITORS, EXCLUDING NeoCapacitors

1. Mounting

(1) Direct Soldering

Keep the following points in mind when soldering the capacitor by means of jet soldering or dip soldering:

(a) Temporarily fixing resin

Because chip tantalum capacitors are larger and subject to more force than chip multilayer ceramic capacitors or chip resistors, more resin is required to temporarily secure the solid tantalum capacitors. However, if too much resin is used, the resin adhering to the patterns on a printed circuit board may adversely affect the solderability.

(b) Pattern design

Case	a	b	c
P	2.2	1.4	0.7
A2 (U), A	2.9	1.7	1.2
B3 (W), B2 (S)	3.0	2.8	1.6
C2, C	4.1	2.3	2.4
V, D	5.2	2.9	3.7

The above dimensions are for reference only. If the capacitor is to be mounted by this method, and if the pattern is too small, the solderability may be degraded.

(c) Temperature and time

Keep the peak temperature and time within the following values:

Solder temperature 260°C max.

Time 5 seconds max.

Whenever possible, perform preheating (at 150°C max.) for a smooth temperature profile. To maintain reliability, mount the capacitor at low temperature and in a short time.

(d) Component layout

If many types of chip components are mounted on a printed circuit board that is to be soldered by means of jet soldering, solderability may not be uniform over the entire board, depending on the layout and density of the components on the board (also take into consideration generation of flux gas).

(e) Flux

Use resin-based flux. Do not use flux with strong acidity.

(2) Reflow Soldering

Keep the following points in mind when soldering the capacitor in a soldering oven or with a hot plate:

(a) Pattern design (in accordance with IEC61188)

(mm)

Case	G Max.	Z Min.	X Min.	Y (reference)
J *	0.65	1.65	0.65	0.5
P2*	1.05	2.05	0.80	0.5
A3*	1.65	3.25	1.1	0.8
P	0.5	2.6	1.2	0.9
A2 (U), A	1.1	3.8	1.5	1.05
B3 (W), B2 (S)	1.4	4.1	2.7	1.35
C2, C	2.9	6.9	2.7	2.0
V, D	4.1	8.2	2.9	2.05

* F/SV Series only (Conform to IEC 61188-5-2)

The above dimensions are recommended. Note that if the pattern is too big, the component may not be mounted in place.

(b) Temperature and time

Keep the peak temperature and time within the following values:

Solder temperature 260°C max.

Time 10 seconds max.

Whenever possible, perform preheating (at 150°C max.) for a smooth temperature profile. To maintain reliability, mount the capacitor at low temperature and in a short time. The peak temperature and time shown above are applicable when the capacitor is to be soldered in a soldering oven or with a hot plate. When the capacitor is soldered by means of infrared reflow soldering, the internal temperature of the capacitor may rise beyond the surface temperature.

Temperature and Time

(3) Using a Soldering Iron

When soldering the capacitor with a soldering iron, controlling the temperature at the tip of the soldering iron is very difficult. However, it is recommended that the following temperature and time be observed to maintain the reliability of the capacitor:

Iron temperature 350°C max.

Time 3 seconds max.

Iron power 30 W max.

2. Cleaning

Generally, several organic solvents are used for flux cleaning of an electronic component after soldering. Many cleaning methods, such as immersion cleaning, rinse cleaning, brush cleaning, shower cleaning, vapor cleaning, and ultrasonic cleaning, are available; cleaning methods may be used alone or two or more may be used in combination. The temperature of the organic solvent may vary from room temperature to several 10°C, depending on the desired effect. If cleaning is carried out with emphasis placed only on the cleaning effect, however, the marking on the electronic component cleaned may be erased, the appearance of the component may be damaged, and, in the worst case, the component may be functionally damaged. It is therefore recommended that the R series solid tantalum capacitor be cleaned under the following conditions:

Recommended conditions of flux cleaning

- (1) Cleaning solvent Chlorosen, isopropyl alcohol
- (2) Cleaning method Shower cleaning, rinse cleaning, vapor cleaning
- (3) Cleaning time 5 minutes max.

Note. Ultrasonic cleaning

This cleaning method is extremely effective for eliminating dust generated by mechanical processes, but may pose problems depending on the condition. An experiment conducted by NEC TOKIN confirmed that the external terminals of the capacitor were cut when it was cleaned with some ultrasonic cleaning machines. The cause of this phenomenon is metal fatigue of the capacitor terminals due to ultrasonic cleaning. To prevent the terminal from being cut, decreasing the output power of the ultrasonic cleaning machine or shortening the cleaning time may be effective. However, it is difficult to specify the cleaning conditions because there are many factors involved, such as the conversion efficiency of the ultrasonic oscillator, transfer efficiency of the cleaning bath, difference in cleaning effect depending on the location in the cleaning bath, the size and quantity of the printed circuit boards to be cleaned, and the securing states of the components on the boards. It is therefore recommended that ultrasonic cleaning be avoided as much as possible.

If ultrasonic cleaning is essential, make sure through experiments that no abnormalities occur as a result of the cleaning. For further information, consult NEC TOKIN.

3. Other

- (1) Do not subject the capacitor to excessive vibration and shock.
- (2) The solderability of the capacitor may be degraded by humidity. Store the capacitor at room temperature (–5 to +40°C) and humidity (40 to 60% RH).
- (3) Take care that no external force is applied to tape-packaged products (if the packaging material is deformed, the capacitor may not be automatically mounted by a chip mounter).

NOTES ON USING NeoCapacitor

1. Permissible Ripple Current

Permissible ripple current shall be derated as follows:

(1) Temperature Change

25°C: Rating value

85°C: 0.9 times rating value

105°C: 0.4 times rating value

(2) Switching Frequency

10 kHz: 0.75 times rating value

100 kHz: rating value

500 kHz: 1.1 times rating value

1 MHz: 1.3 times rating value

2. Mounting

This capacitor is designed to be surface mounted by means of reflow soldering.

(The conditions under which the capacitor should be soldered with a soldering iron are explained in (2) Using a Soldering Iron. Because the capacitor is not designed to be soldered by means of laser beam soldering, VPS, or flow soldering, the conditions for these soldering methods are not explained in this document.

(1) Reflow Soldering

Keep the following points in mind when soldering the capacitor in a soldering oven with a hot plate:

(a) Pattern design (in accordance with IEC61188)

(mm)

Case	G Max.	Z Min.	X Min.	Y (reference)
J	0.7	2.5	1.0	0.9
P	0.5	2.6	1.2	1.05
A2 (U), A	1.1	3.8	1.5	1.35
B3 (W), B2 (S)	1.4	4.1	2.7	1.35
C2, C	2.9	6.9	2.7	2.0
V, D	4.1	8.2	2.9	2.05

The above dimensions are recommended. Note that if the pattern is too big, the component may not be mounted in place.

(b) Temperature and time

Keep the peak temperature and time within the following recommended conditions.

Whenever possible, perform preheating (at 150°C max.) for a smooth temperature profile. To maintain reliability, mount the capacitor at low temperature and in a short time. The peak temperature and time shown above are applicable when the capacitor is to be soldered in a soldering oven or with a hot plate. When the capacitor is soldered by means of infrared reflow soldering, the internal temperature of the capacitor may rise beyond the surface temperature.

(2) Using a Soldering Iron

When soldering the capacitor with a soldering iron, controlling the temperature at the tip of the soldering iron is very difficult. However, it is recommended that the following temperature and time be observed to maintain the reliability of the capacitor:

Iron temperature ... 350°C max.
Time 3 seconds max.
Iron power 30 W max.

3. Cleaning

Generally, several organic solvents are used for flux cleaning of an electronic component after soldering. Many cleaning methods, such as immersion cleaning, rinse cleaning, brush cleaning, shower cleaning, vapor cleaning, and ultrasonic cleaning, are available, which may be used alone or in combination. The temperature of the organic solvent may vary from room temperature to several 10°C, depending on the desired effect. If cleaning is carried out with emphasis placed only on the cleaning effect, however, the marking on the electronic component cleaned may be erased, the appearance of the component may be damaged, and, in the worst case, the component may be functionally damaged. It is therefore recommended that the NeoCapacitor be cleaned under the following conditions:

[Recommended conditions of flux cleaning]

- (1) Cleaning solvent Isopropyl alcohol
- (2) Cleaning method Shower cleaning, rinse cleaning, vapor cleaning
- (3) Cleaning time 5 minutes max.

Note: Ultrasonic cleaning

This cleaning method is extremely effective for eliminating dust generated by mechanical processes, but may pose problems, depending on the condition. An experiment conducted by NEC TOKIN confirmed that the external terminals of the capacitor were cut when it was cleaned with some ultrasonic cleaning machines. The cause of this phenomenon is metal fatigue of the capacitor terminals due to ultrasonic cleaning. To prevent the terminal from being cut, decreasing the output power of the ultrasonic cleaning machine or decreasing the cleaning time may be effective. However, it is difficult to specify safe cleaning conditions because there are many factors involved, such as the conversion efficiency of the ultrasonic oscillator, transfer efficiency of the cleaning bath, difference in cleaning effect depending on the location in the cleaning bath, the size and quantity of the printed circuit boards to be cleaned, and the securing states of the components on the boards. It is therefore recommended that ultrasonic cleaning be avoided as much as possible.

If ultrasonic cleaning is essential, make sure through experiments that no abnormalities occur as a result of the cleaning. For further information, contact NEC TOKIN.

4. Derating

Apply appropriate voltage to the capacitors according to the failure rate estimation. It is recommended that the applied voltage be less than 80% of the rated voltage.

5. Other

- (1) Do not subject the capacitor to excessive vibration and shock.
- (2) The solderability of the capacitor may be degraded by humidity. Store the capacitor at room temperature (–5 to +40°C) and humidity (40 to 60% RH).
- (3) Take care that no external force is applied to tape-packaged products (if the packaging material is deformed, the capacitor may not be automatically mounted by automatic insertion equipment).

The information in this document is based on documents issued in Jan. 2005 at the latest. The information is subject to change without notice. For actual design-in, refer to the latest of data sheets, etc., for the most up-to-date specifications of the device.

No part of this document may be copied or reproduced in any form or by any means without the prior written consent of NEC TOKIN Corporation. NEC TOKIN Corporation assumes no responsibility for any errors which may appear in this document.

NEC TOKIN Corporation does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from use of a device described herein or any other liability arising from use of such device. No license, either express, implied, or otherwise, is granted under any patents, copyrights, or other intellectual property rights of NEC TOKIN Corporation or others.

While NEC TOKIN Corporation has been making a continuous effort to enhance the reliability of its electronic components, the possibility of defects cannot be eliminated entirely. To minimize risks of damage or injury to persons or property arising from a defect in an NEC TOKIN electronic component, customers must incorporate sufficient safety measures in its design, such as redundancy, fire-containment, and anti-failure features. NEC TOKIN devices are classified into the following three quality grades:

"Standard," "Special," and "Specific." The Specific quality grade applies only to devices developed based on a customer-designated quality assurance program for a specific application. The recommended applications of a device depend on its quality grade, as indicated below. Customers must check the quality grade of each device before using it in a particular application.

Standard: Computers, office equipment, communications equipment, test and measurement equipment, audio and visual equipment, home electronic appliances, machine tools, personal electronic equipment, and industrial robots

Special: Transportation equipment (automobiles, trains, ships, etc.), traffic control systems, anti-disaster systems, anti-crime systems, safety equipment, and medical equipment (not specifically designed for life support)

Specific: Aircraft, aerospace equipment, submersible repeaters, nuclear reactor control systems, life support systems, or medical equipment for life support, etc.

The quality grade of NEC TOKIN devices is "Standard" unless otherwise specified in NEC TOKIN's data sheets or data books. If customers intend to use NEC TOKIN devices for applications other than those specified for Standard quality grade, they should contact an NEC TOKIN sales representative in advance.

(Note)

- (1) "NEC TOKIN" as used in this statement means NEC TOKIN Corporation and also includes its majority-owned subsidiaries.
- (2) "NEC TOKIN electronic component products" means any electronic component product developed or manufactured by or for NEC TOKIN (as defined above).
