## High-Speed Drivers with JFET Switch

### Features

- Constant ON-Resistance for Signals to  $\pm 10V$  (DG182, DG185, DG188, DG191), to  $\pm 7.5V$  (All Devices)
- $\pm 15V$  Power Supplies
- $< 2nA$  Leakage from Signal Channel in Both ON and OFF States
- TTL, DTL, RTL Direct Drive Compatibility
- $t_{ON}, t_{OFF} < 150ns$ , Break-Before-Make Action
- Cross-Talk and Open Switch Isolation  $> 50dB$  at 10MHz (75 $\Omega$  Load)

### Description

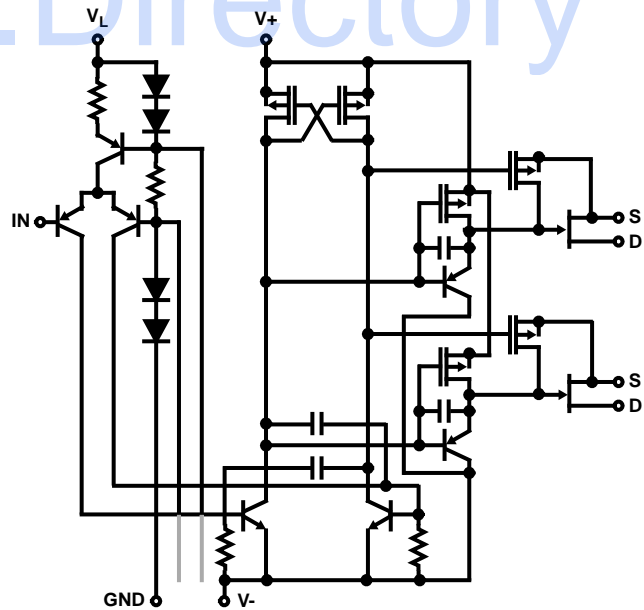

The DG181 thru DG191 series of analog gates consist of 2 or 4 N-channel junction-type field-effect transistors (JFET) designed to function as electronic switches. Level-shifting drivers enable low-level inputs (0.8V to 2V) to control the ON-OFF state of each switch. The driver is designed to provide a turn-off speed which is faster than turn-on speed, so that break-before-make action is achieved when switching from one channel to another. In the ON state, each switch conducts current equally well in both directions. In the OFF condition, the switches will block voltages up to 20V peak-to-peak. Switch-OFF input-output isolation 50dB at 10MHz, due to the low output impedance of the FET-gate driving circuit.

### Functional Diagrams (Typical Channel)

NOTES:

- See Switching State Diagrams for V<sub>IN</sub> "ON" and V<sub>IN</sub> "OFF" Test Conditions.
- Normally the minimum signal handling capability of the DG181 thru DG191 family is 20V peak to peak for the 75Ω switches and 15V peak-to-peak for the 30Ω (refer I<sub>D</sub> and I<sub>S</sub> tests above).
- For other Analog Signals, the following guidelines can be used: proper switch turn-off requires that V<sub>-</sub> ≤ V<sub>ANALOG(peak)</sub> - V<sub>P</sub> where V<sub>P</sub> = 7.5V for the 80Ω switches and V<sub>P</sub> = 5.0V for 75Ω switches e.g., -10V minimum (-peak) analog signal and a 75Ω switch (V<sub>P</sub> = 5V), requires that V<sub>-</sub> ≤ -10V -5V = -15V.

## DG181 Series

### DUAL SPST - DG181/182

| TEST CONDITIONS              |              |
|------------------------------|--------------|
| V <sub>IN</sub> "ON" = 0.8V  | All Channels |
| V <sub>IN</sub> "OFF" = 2.0V | All Channels |

NOTE:

- Switch states are for logic "1" input = 2.0V.

### SPDT - DG187/188

| TEST CONDITIONS              |           |
|------------------------------|-----------|
| V <sub>IN</sub> "ON" = 2.0V  | Channel 1 |
| V <sub>IN</sub> "ON" = 0.8V  | Channel 2 |
| V <sub>IN</sub> "OFF" = 2.0V | Channel 2 |
| V <sub>IN</sub> "OFF" = 0.8V | Channel 1 |

NOTE:

- Switch states are for logic "1" input = 2.0V.

### DUAL DPST - DG184/185

| TEST CONDITIONS              |              |
|------------------------------|--------------|
| V <sub>IN</sub> "ON" = 2.0V  | All Channels |
| V <sub>IN</sub> "OFF" = 0.8V | All Channels |

NOTE:

- Switch states are for logic "1" input = 2.0V.

### SPDT - DG190/191

| TEST CONDITIONS              |                 |
|------------------------------|-----------------|
| V <sub>IN</sub> "ON" = 2.0V  | Channel 1 and 2 |
| V <sub>IN</sub> "ON" = 0.8V  | Channel 3 and 4 |
| V <sub>IN</sub> "OFF" = 2.0V | Channel 3 and 4 |
| V <sub>IN</sub> "OFF" = 0.8V | Channel 1 and 2 |

NOTE:

- Switch states are for logic "1" input = 2.0V.

## Switching Time Test Circuits

FIGURE 1. SWITCHING TIME TEST WAVEFORMS (Note 1)

FIGURE 2. SWITCHING TIME TEST CIRCUIT (Note 2)

NOTES:

- Switch output waveform shown for V<sub>S</sub> = constant with logic input waveform as shown.
- V<sub>S</sub> may be + or - as per switching time test circuit. V<sub>O</sub> is the steady state output with switch on. Feedthrough via gate capacitance may result in spikes at leading and trailing edge of output waveform.

# DG181 Series

## Ceramic Dual-In-Line Metal Seal Packages (SBDIP)

### D14.3 MIL-STD-1835 CDIP2-T14 (D-1, CONFIGURATION C) 14 LEAD CERAMIC DUAL-IN-LINE METAL SEAL PACKAGE

**NOTES:**

1. Index area: A notch or a pin one identification mark shall be located adjacent to pin one and shall be located within the shaded area shown. The manufacturer's identification shall not be used as a pin one identification mark.
2. The maximum limits of lead dimensions b and c or M shall be measured at the centroid of the finished lead surfaces, when solder dip or tin plate lead finish is applied.
3. Dimensions b1 and c1 apply to lead base metal only. Dimension M applies to lead plating and finish thickness.
4. Corner leads (1, N, N/2, and N/2+1) may be configured with a partial lead paddle. For this configuration dimension b3 replaces dimension b2.
5. Dimension Q shall be measured from the seating plane to the base plane.
6. Measure dimension S1 at all four corners.
7. Measure dimension S2 from the top of the ceramic body to the nearest metallization or lead.
8. N is the maximum number of terminal positions.
9. Braze fillets shall be concave.
10. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
11. Controlling dimension: INCH.

## DG181 Series

### Metal Can Packages (Can)

**NOTES:**

1. (All leads)  $\varnothing b$  applies between L1 and L2.  $\varnothing b1$  applies between L2 and 0.500 from the reference plane. Diameter is uncontrolled in L1 and beyond 0.500 from the reference plane.
2. Measured from maximum diameter of the product.
3.  $\alpha$  is the basic spacing from the centerline of the tab to terminal 1 and  $\beta$  is the basic spacing of each lead or lead position (N - 1 places) from  $\alpha$ , looking at the bottom of the package.
4. N is the maximum number of terminal positions.
5. Dimensioning and tolerancing per ANSI Y14.5M - 1982.
6. Controlling dimension: INCH.
