

# SN54HCT574, SN74HCT574 OCTAL D-TYPE EDGE-TRIGGERED FLIP-FLOPS WITH 3-STATE OUTPUTS

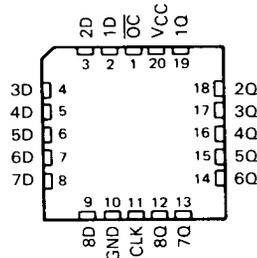

D2804, MARCH 1984—REVISED SEPTEMBER 1987

- Inputs are TTL-Voltage Compatible
- High-Current 3-State Noninverting Outputs Drive Bus-Lines Directly or Up to 15 LSTTL Loads
- Bus-Structured Pinout
- Package Options Include Plastic "Small Outline" Packages, Ceramic Chip Carriers, and Standard Plastic and Ceramic 300-mil DIPs
- Dependable Texas Instruments Quality and Reliability

## description

These 8-bit registers feature three-state outputs designed specifically for bus driving. They are particularly suitable for implementing buffer registers, I/O ports, bidirectional bus drivers, and working registers.

The eight edge-triggered D-type flip-flops enter data on the low-to-high transition of the clock.

An output-control ( $\overline{OC}$ ) input can be used to place the eight outputs in either a normal logic state (high or low logic levels) or a high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and increased high-logic level provide the capability to drive the bus lines in a bus-organized system without need for interface or pull-up components.

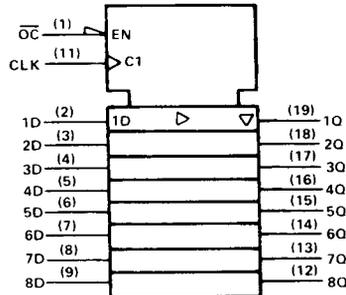

The output control does not affect the internal operation of the flip-flops. Old data can be retained or new data can be entered while the outputs are in the high-impedance state.

The SN54HCT574 is characterized for operation over the full military temperature range of  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ . The SN74HCT574 is characterized for operation from  $-40^{\circ}\text{C}$  to  $85^{\circ}\text{C}$ .

FUNCTION TABLE  
(EACH FLIP-FLOP)

| INPUTS          |     |   | OUTPUT |
|-----------------|-----|---|--------|
| $\overline{OC}$ | CLK | D | Q      |
| L               | ↑   | H | H      |
| L               | ↑   | L | L      |
| L               | L   | X | $Q_0$  |
| H               | X   | X | Z      |

logic diagram (positive logic)

**absolute maximum ratings over operating free-air temperature range†**

|   |                  |
|---|------------------|
| Supply voltage, $V_{CC}$ .....  | -0.5 V to 7 V    |
| Input clamp current, $I_{IK}$ ( $V_I < 0$ or $V_I > V_{CC}$ ) .....         | $\pm 20$ mA      |
| Output clamp current, $I_{OK}$ ( $V_O < 0$ or $V_O > V_{CC}$ ) .....        | $\pm 20$ mA      |
| Continuous output current, $I_O$ ( $V_O = 0$ to $V_{CC}$ ) .....            | $\pm 35$ mA      |
| Continuous current through $V_{CC}$ or GND pins .....                       | $\pm 70$ mA      |
| Lead temperature 1,6 mm (1/16 in) from case for 60 s: FK or J package ..... | 300 °C           |
| Lead temperature 1,6 mm (1/16 in) from case for 10 s: DW or N package ..... | 260 °C           |
| Storage temperature range .....   | -65 °C to 150 °C |

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
