

**GENERAL DESCRIPTION**

The LM101A/LM201A and LM301A are general purpose, high performance operational amplifiers fabricated monolithically on a silicon chip by the planar epitaxial process. The units may be fully compensated with the addition of a 30pF capacitor stabilizing the circuit for all feedback configurations including capacitive loads.

The device may be operated as a comparator with a differential input as high as  $\pm 30V$ . Used as a comparator the output can be clamped at any desired level to make it compatible with logic circuits.

The LM101A operational amplifier will operate over the full military temperature range from  $-55^{\circ}C$  to  $+125^{\circ}C$ . The commercial version, the LM301A operates over a temperature range from  $0^{\circ}C$  to  $+70^{\circ}C$ .

The LM201A is the same as the LM101A except its performance is guaranteed from  $-25^{\circ}C$  to  $+85^{\circ}C$ .
